

CrimeStat[®] III

VERSION 3.0

**A Spatial Statistics Program for the Analysis of
Crime Incident Locations**

Ned Levine & Associates

Houston, TX

The National Institute of Justice

Washington, DC

November 2004

Table of Contents

Table of Contents	i
Acknowledgments	vii
License Agreement and Disclaimer	x

Part I: Program Overview

Chapter 1: Introduction to <i>CrimeStat</i>	1.1
Uses of Spatial Statistics in Crime Analysis	1.1
The <i>CrimeStat III</i> Spatial Statistics Program	1.1
Program Requirements	1.4
Installing the Program	1.6
Step-by-step Instructions	1.9
Options	1.9
Short applications	1.9
On-line Help	1.9
Chapter 1 Endnotes	1.10
Chapter 2: Quickguide to <i>CrimeStat</i>	2.1
I. Data Setup	2.2
Primary File	2.2
Secondary File	2.4
Reference File	2.7
Measurement Parameters	2.9
II. Spatial Description	2.13
Spatial Distribution	2.13
Distance Analysis I	2.19
Distance Analysis II	2.25
‘Hot Spot’ Analysis	2.28
‘Hot Spot’ Analysis I	2.28
‘Hot Spot’ Analysis II	2.35
III. Spatial Modeling	2.40
Interpolation	2.40
Space-Time Analysis	2.47
Journey to Crime Analysis	2.53
IV. Crime Travel Demand	2.59
Crime Travel Demand Data Preparation	2.60
Trip Generation	2.61
Trip Distribution	2.69
Mode Split	2.88

Table of Contents (continued)

Network Assignment	2.97
File Worksheet	2.103
V. Options	2.106
Dynamic Data Exchange (DDE) Support	2.106
Chapter 3: Entering Data into <i>CrimeStat</i>	3.1
Required Data	3.3
Primary File	3.6
Secondary File	3.15
Reference File	3.17
Measurement Parameters	3.23
Distance Calculations	3.28
Saving Parameters	3.31
Statistical Routines and Outputs	3.32
A Tutorial with the Sample Data Set	3.32
Endnotes for Chapter 3	3.37
Part II: Spatial Description	
Chapter 4: Spatial Distribution	4.1
Centrographic Statistics	4.1
Mean Center	4.1
Weighted Mean Center	4.4
Median Center	4.6
Center of Minimum Distance	4.12
Standard Deviation of the X and Y Coordinates	4.12
Standard Distance Deviation	4.15
Standard Deviational Ellipse	4.17
Geometric Mean	4.19
Harmonic Mean	4.22
Average Density	4.24
Output Files	4.24
Statistical Testing	4.25
Directional Mean and Variance	4.36
Convex Hull	4.44
Spatial Autocorrelation	4.47
Moran's I Statistic	4.48
Geary's C Statistic	4.56
Moran Correlogram	4.61
Endnotes for Chapter 4	4.67

Table of Contents (continued)

Chapter 5: Distance Analysis I and II	5.1
Nearest Neighbor Index	5.1
K-order Nearest Neighbor Index	5.7
Linear Nearest Neighbor Index	5.12
K-order Linear Nearest Neighbors	5.18
Ripley's K Statistic	5.19
Assign Primary Points to Secondary Points	5.33
Distance Matrices	5.36
Endnotes for Chapter 5	5.40
Chapter 6: 'Hot Spot' Analysis I	6.1
Hot Spots	6.1
Statistical Approaches to the Measurement of 'Hot Spots'	6.1
Mode	6.8
Fuzzy mode	6.8
Nearest Neighbor Hierarchical Clustering	6.14
Risk-adjusted Nearest Neighbor Hierarchical Clustering	6.36
Endnotes for Chapter 6	6.53
Chapter 7: 'Hot Spot' Analysis II	7.1
Spatial and Temporal Analysis of Crime (STAC) by Richard Block and Carolyn Rebecca Block	7.1
K-Means Partitioning Clustering	7.19
Anselin's Local Moran Statistics	7.29
Some Thoughts on the Concept of 'Hot Spots'	7.36
Endnotes for Chapter 7	7.41
Part III: Spatial Modeling	
Chapter 8: Kernel Density Interpolation	8.1
Kernel Density Estimation	8.1
Single Density Estimates	8.14
Dual Density Estimates	8.25
Visually Presenting Kernel Estimates	8.36
Conclusion	8.36
Endnotes for Chapter 8	8.40
Chapter 9: Space-Time Analysis	9.1
Measurement of Time in <i>CrimeStat</i>	9.1
Space-Time Interaction	9.1
Knox Index	9.4
Mantel Index	9.8
Spatial-temporal Moving Average	9.12

Table of Contents (continued)

Correlated Walk Analysis	9.14
Accuracy of Predictions	9.36
Endnotes for Chapter 9	9.42
Chapter 10: Journey to Crime Estimation	10.1
Location Theory	10.1
Travel Demand Modeling	10.2
Travel Behavior of Criminals	10.7
The <i>CrimeStat</i> Journey to Crime Routine	10.17
Distance Modeling Using Mathematical Functions	10.18
The Journey to Crime Routine Using a Mathematical Formula	10.41
Distance Modeling Using an Empirically Determined Function	10.43
The Journey to Crime Routine Using the Calibrated File	10.61
Draw Crime Trips	10.68
How Accurate are the Methods?	10.68
Cautionary Notes	10.76
Endnotes for Chapter 10	10.79
Part IV: Crime Travel Demand Modeling	
Chapter 11: Overview of Crime Travel Demand Modeling	11.1
Travel Demand Forecasting	11.1
Need for More Complex Travel Model of Crime	11.2
Crime Travel Demand Framework	11.3
Crime Travel Definitions	11.7
Crime Travel Demand v. Journey to Crime	11.11
Models v. Description	11.13
Uses of a Crime Travel Demand Model	11.15
References on Travel Demand Modeling	11.18
Endnotes for Chapter 11	11.19
Chapter 12: Data Preparation for Crime Travel Demand Modeling	12.1
Choice of a Zonal System	12.1
Obtaining Crime Data	12.8
Developing a Predictive Model	12.19
Obtaining Land Use Data	12.22
Spatial Location Variables	12.23
Defining Policy or Intervention Variables	12.24
Where to Obtain These Data?	12.25
Creating an Integrated Data Set	12.26
Obtaining Network Data	12.27
Conclusion	12.37
Endnotes for Chapter 12	12.38

Table of Contents (continued)

Chapter 13: Trip Generation	13.1
Background	13.1
Modeling Trip Generation	13.1
Approaches Towards Trip Generation Modeling	13.6
Diagnostics Tests	13.18
Adding Special Generators	13.25
Adding External Trips	13.26
Balancing Predicted Origins and Predicted Destinations	13.27
Summary of the Trip Generation Model	13.28
The <i>CrimeStat</i> Trip Generation Model	13.28
Calibrate Model	13.30
Make Trip Generation Prediction	13.33
Balance Predicted Origins & Destinations	13.35
Example Trip Generation Model	13.36
Strengths and Weaknesses of Regression Modeling of Trips	13.54
Summary	13.57
Endnotes for Chapter 13	13.58
Chapter 14: Trip Distribution	14.1
Theoretical Background	14.1
The Gravity Model	14.4
Travel Impedance	14.7
Alternative Models: Intervening Opportunities	14.12
Methods of Estimation	14.13
<i>CrimeStat</i> Trip Distribution Routines	14.14
Describe Origin-Destination Trips	14.15
Calibrate Impedance Function	14.21
Setup of Origin-Destination Model	14.26
The Origin-Destination Model	14.37
Compared Observed & Predicted Trips	14.43
Uses of Trip Distribution Analysis	14.66
Endnotes for Chapter 14	14.70
Chapter 15: Mode Split	15.1
Theoretical Background	15.1
Utility of Travel and Mode Choice	15.1
Relative Accessibility	15.9
<i>CrimeStat</i> Mode Split Tools	15.22
Applying the Relative Accessibility Function	15.27
Usefulness of Mode Split Modeling	15.33
Limitations to the Mode Split Methodology	15.35
Conclusions	15.36
Endnotes for Chapter 15	15.37

Table of Contents (continued)

Chapter 16: Network Assignment	16.1
Theoretical Background	16.1
Networks	16.2
Shortest Path Algorithms	16.9
Routing Algorithms	16.30
The <i>CrimeStat</i> Network Assignment Routine	16.31
Crime Types	16.46
Uses of Network Assignment	16.46
Conclusions	16.48
Endnotes for Chapter 16	16.49
Chapter 17: Case Studies in Crime Travel Demand Modeling	17.1
by Richard Block and Dan Helms	
I. Travel Patterns of Chicago Robbery Offenders	17.1
by Richard Block	
II. Application of Travel Demand Behavior Model on	
Crime Data from Las Vegas, Nevada	17.25
by Dan Helms	
References	R-1
Appendix A: Dynamic Data Exchange Support	A-1
Appendix B: Some Notes on the Statistical Comparison of Two Samples	B-1
Appendix C: Ordinary Least Squares and Poisson Regression Models	
by Luc Anselin	C-1

Acknowledgments

CrimeStat III was developed under the direction of Dr. Ned Levine of *Ned Levine & Associates*, Houston, TX, from Grant No. 2002-IJ-CX-0007, awarded by the National Institute of Justice (NIJ), Office of Justice Programs, US Department of Justice. The developer would like to thank the many individuals who contributed to this program:

1. Mr. Long Doan of Doan Consulting, Falls Church, VA who was the original programmer for the project. Mr. Doan's brilliance in programming was essential to the development of the initial program. For this version, he had the role of ensuring system integration.
2. Ms. Haiyan Teng of Houston, TX, who was the primary programmer for version 3.0. Her high level of programming competence and mathematical expertise was essential for the successful completion of the crime travel demand routines.
3. Professor Richard Block of Loyola University and Mr. Daniel Helms of the Law Enforcement Corrections and Technology Center at the University of Denver who served as criminal justice advisors to the project. They played critical roles in testing the crime travel demand routines with data from Chicago and Las Vegas. They are co-authors of one chapter.
4. Professor Luc Anselin of the University of Illinois at Urbana-Champaign who provided technical advice and documentation on the regression models used in the crime travel demand model.
5. Professor Peter Stopher of the University of Sidney in Australia who provided technical advice on the crime travel demand model.
6. Mr. Phil Canter of the Baltimore County Police Department, Towson, MD who has been with the project since its inception. For this round, he provided support and data for analysis.
7. Ms. Sandra Wortham of Wortham Design, Wilmington, DE who designed the graphical icons used in the program.
8. Mr. Ian Cahill of Cahill Software, Ottawa, Ontario for providing Poisson and OLS regression maximum likelihood code, based on his MLE++ software package. <http://www.magma.ca/~cahill>.
9. The GNU project library for providing F-test and t-test code. <http://www.gnu.org>.
10. Dr. Carolyn Rebecca Block of the Illinois Criminal Justice Information Authority for providing the STAC routine.

11. The dedicated project managers at the Mapping and Analysis for Public Safety Program (MAPS) at NIJ: Ms. Debra Stoe and Mr. Ron Wilson. They both supported the project through this development and provided valuable feedback on the new routines and their utility.
12. All the other individuals from the MAPS unit who have supported the project in earlier stages: for the second version, Ms. Elizabeth Groff of the Institute of Law and Justice, Mr. Eric Jefferis of the University of Akron, and Professor Robert Langworthy of the University of Alaska; and, for the first version, Ms. Cindy Mamalian and Dr. Nancy LaVigne of the Urban Institute.
13. To the individuals of the Baltimore Metropolitan Council who provided network and other data on both Baltimore County and the City of Baltimore, in particular Jacqueline Zee, Matt de Rouville, and Gene Bandy. Thanks also to Alan Clark of the Houston-Galveston Area Council for making available data on Houston motor vehicle crashes.
14. To individuals who have provided feedback and information for this and previous versions of CrimeStat: Professor Eric Renshaw of the University of Strathclyde in Glasgow, Mr. John DeVoe of Siebel Systems, Professor Jim LeBeau of Southern Illinois University, Mr. Bryan Hill of the Glendale (Arizona) Police Department, Professor Karl Kim of the University of Hawaii, Mr. Luben Dimov of Louisiana State University, Mr. Weijie Zhou of the Houston-Galveston Area Council, Mr. Keith Alcock of Arizona State University, and Mr. Martin Hittleman of Valley Community College in Los Angeles.
15. To the individuals who provided examples for the manual: Renato Assunção, Cláudio Beato, Bráulio Silva of the Federal University of Minas Gerais in Belo Horizonte, Brazil; Daniel Bibel of the Massachusetts State Police; Gilberto Câmara, Silvana Amaral, Antônio Miguel V. Monteiro, and José A. Quintanilha of the Instituto Nacional de Pesquisas Espaciais in Brazil; Spencer Chainey of InfoTech Enterprises Europe in London, England; Richard Crepeau of Appalachian State University; Jaishankar Karuppanan of the University of Madras in Chepauk, India; Yongmei Lu of Southwest Texas State University; David McGrath of the Johnstown Castle Research Centre in Wexford, Ireland; Dietrich Oberwittler and Marc Wiesenhütter of the Max Planck Institute for Foreign and International Criminal Law in Freiburg, Germany; Derek Paulsen of Appalachian State University; Gaston Pezzuchi of the Buenos Aires Province Police Force; Mike Saweda of the University of Ottawa; Takahito Shimada of the National Police Agency in Chiba, Japan; Brent Snook, Paul Taylor & Craig Bennell of the University of Liverpool, England; Matthew Stone of the California Department of Health Services, Chaosheng Zhang of the National University of Ireland in Galway, Ireland; Marta A. Guerra of the Centers for Disease Control and Prevention; Richard Hoskins of the State of Washington Department of Health; Tom

Reynolds of the University of Texas School of Public Health along with Luc Anselin, Richard Block, Carolyn Block, Phil Canter, Long Doan, Daniel Helms, Jim LeBeau, Ron Wilson and Bryan Hill mentioned above.

16. To the dozens of individuals who provided feedback and suggestions for improving the program. They are, unfortunately, too numerous to mention by name.
17. Finally, this program is dedicated to my wife, Dr. C. Elizabeth Castro, for being so patient and supportive throughout this long process. She is the inspiration for this whole effort.
