REQUEST FOR INFORMATION ON USE OF ICPSR RESOURCES

To provide funding agencies with essential information about use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, users of ICPSR data are requested to send to ICPSR bibliographic citations for each completed manuscript or thesis abstract. Please indicate in a cover letter which data were used.

DATA DISCLAIMER

The original collector of the data, ICPSR, and the relevant funding agency bear no responsibility for uses of this collection or for interpretations or inferences based upon such uses.

SUMMARY

The purpose of this multisite program evaluation project was to provide detailed and systematic descriptions of participants and treatment program components for a sample of five drug treatment programs in local jails. Three of the programs were located in California: Jail Education and Treatment (JET), Deciding, Educating, Understanding, Counseling, and Evaluation (DEUCE), and Rebuilding, Educating, Awareness, Counseling, and Hope (REACH). Two programs were in New York State: Substance Abuse Intervention Division (SAID) and New Beginnings. The project was aimed at assessing program completion rates as well as 12-month post-release recidivism for program participants versus matched controls. Background information obtained about the participating offenders includes sex, race, age, education, marital status, and employment status, as well as history of drug use, previous drug treatment, mental illness, inpatient/outpatient episodes, and offenses and sentencing. Additional data cover program location, dates of release from the program and from jail, type of program termination, type of residence upon release, and anticipated post-custody treatment. Information on each conviction/disposition was obtained through state criminal information systems, and state-level criminal history data (rap sheets) were collected for both the treatment and comparison groups. The unit of analysis is arrest events.

GENERAL STUDY OVERVIEW

KEY WORDS

Controlled drugs, drug treatment, program evaluation

PURPOSE OF THE STUDY

The purpose of this project was to provide detailed and systematic descriptions of participants and services for a sample of five drug treatment programs in local jails. The project was aimed at assessing program completion rates as well as 12-month post-release recidivism for program participants versus matched controls. An intended benefit of the research was to provide recommendations regarding the status and efficacy of drug treatment in jails.

METHODS

STUDY DESIGN

Five drug treatment programs in local jails were selected for the study. Three of the programs were located in California: Jail Education and Treatment (JET), Deciding, Educating, Understanding, Counseling, and Evaluation (DEUCE), and Rebuilding, Educating, Awareness, Counseling, and Hope (REACH). Two programs were in New York State: Substance Abuse Intervention Division (SAID) and New Beginnings. The data were collected by sampling offenders who entered and exited the programs during the evaluation period. In most sites, program participants were interviewed by a program staff member or NCCD researcher at both program admission and release. If personal interviews were not possible, client files were examined. The admission data were collected to (1) provide a description of the

offenders served, (2) provide a basis for comparing treatment and control groups to assure no a priori differences, and (3) provide a set of "offender" variables that could potentially predict outcome. To develop comparison groups, strategies tailored to each site had to be developed. For most sites, a sample of offenders serving time in the same facility but not participating in drug treatment was obtained (through computerized files) by matching on race, age, primary offense, and sentence length. A 12-month cut-off date was determined for each person based on his or her jail release date. Conviction and disposition data during the three years prior to jail admission were also collected. Although attempts were made to acquire complete conviction information for all study cases, this was not possible. In some cases, rap sheets could not be located. It is possible that the conviction leading to incarceration -- and inclusion in this sample -- was for an offense that was not reportable to the state, or that conviction was not obtained.

SOURCES OF INFORMATION

Program participants were interviewed by a program staff member or NCCD researcher at both program admission and release, using standardized forms. If personal interviews were not possible, information was obtained through client files and police records. Information on each conviction/disposition was obtained through state criminal information systems. State-level criminal history data (rap sheets) were also collected for the treatment and comparison groups. In the California sites, copies of rap sheets were provided by the jails. For the two New York sites, computerized data were obtained from the Division of Criminal Justice Services, Bureau of Research and Evaluation. State-level rather than county-level data were requested for all sites to capture the most serious convictions reported to the state (felonies) and to include convictions that occurred outside of the respective counties.

SAMPLE

The study was administered in five local jail sites. Each site had a different drug treatment program in effect. The five sites were selected for several reasons, including their geographical convenience and their amenability to research. The study sites were also diverse with respect to program history and setting, participating offenders, services offered, and length of stay. Selection of individual arrestees varied in each of the five sites. Although all participation was voluntary, some participation was initiated by probation officers. In some programs, incentives were given for participation. A total of 1,428 arrestees are represented in the sample.

RESPONSE RATES

Not available.

DATE(S) OF DATA COLLECTION

1991-1993

SUMMARY OF CONTENTS

DESCRIPTION OF VARIABLES

The jail admission form solicited demographic information such as sex, age, race, education, marital status, and employment status, as well as information on history of drug use, mental illness, inpatient/outpatient episodes, and previous drug treatment. The exit form contained dates of release from the program and from jail, as well as information about type of program termination, type of residence upon release, and anticipated post-custody treatment. Program location is identified for each respondent. The data also include offense and sentencing information for convictions prior to and subsequent to the current offense.

PRESENCE OF COMMON SCALES

None.

UNIT OF OBSERVATION

The unit of analysis is arrest events.

EXTENT OF PROCESSING

ICPSR produced a user guide, codebook, and data definition statements for this data collection. ICPSR also recoded certain variables, standardized missing data codes, reformatted the data, and checked for undocumented codes. Documentation was reformatted and converted to Portable Document Format (PDF).

EXTENT OF COLLECTION

This data collection contains one data file, SAS and SPSS data definition statements, and machine-readable documentation. The documentation is comprised of a user guide, codebook, and data collection instruments, all in one PDF file.

DATA COLLECTION NOTES

The user guide, codebook, and data collection instruments are provided as a Portable Document Format (PDF) file. The PDF file format was developed by Adobe Systems Incorporated and can be accessed using PDF reader software, such as the Adobe Acrobat Reader. Information on how to obtain a copy of the Acrobat Reader is provided in the README file on the diskette version of this study and through the ICPSR Website on the Internet.

FINAL REPORTS AND OTHER PUBLICATIONS

The National Criminal Justice Reference Service (NCJRS) was established in 1972 by the National Institute of Justice (NIJ), of the U.S. Department of Justice, to provide research findings to criminal justice professionals and researchers. NCJRS operates specialized clearinghouses that are staffed by information specialists who supply a range of reference, referral, and distribution services. Final reports and other publications describing research conducted on a variety of criminal justice topics are available. Publications can be obtained from NCJRS at NIJ/NCJRS, Box 6000, Rockville, MD, 20850, 800-851-3420 or 301-251-5500. The URL for the NCJRS homepage is:

http://www.ncjrs.org

DATA RESOURCES PROGRAM ON THE INTERNET

The National Institute of Justice Data Resources Program (DRP) makes datasets from NIJ-funded research and evaluation projects available to the research community and sponsors research and training activities devoted to secondary data analysis. Datasets are archived by the National Archive of Criminal Justice Data (NACJD)

at the Inter-university Consortium for Political and Social Research (ICPSR) at the University of Michigan.

The NACJD maintains a World Wide Web site with instructions for transfering files and sending messages. Criminal justice data funded by the Department of Justice are available via the Internet at this site at no charge to the user. NACJD may be contacted at NACJD/ICPSR, P.O. Box 1248, Ann Arbor, MI, 48106-1248, 800-999-0960 or 313-763-5011. The URL for the NACJD homepage is:

*Variables individually listed only if greater than 5% missing values. Data does not contain skip patterns or skip patterns are not reflected in the data as coded.

CODEBOOK NOTES

UNIT OF ANALYSIS

The unit of analysis for this dataset is arrest events. Consequently, the data file contains arrest records. It contains information on 1,428 individuals who were arrested a total of 8,285 times. The first 43 variables, NEWID to DOB, contain unchanging person-level data for each individual. If an individual has multiple arrest records, these data are repeated on each record. Only the remaining variables, NCCD to MAXSENT, contain unique data for each arrest record.

Users should note that when working with the entire data file the person-level variables, NEWID to DOB, will not accurately represent the distribution of individuals. In order to more easily analyze the person-level data, ICPSR created an indicator variable called FLAG. This variable identifies the first occurrence of person-level data from repeated occurrences. Users who wish to analyze only the person-level variables should select cases where FLAG=1. The resulting number of cases will be 1,428.

The appendix includes a frequency list for the variable NEWID. This variable contains a sequential code for each of the 1,428 individuals in the data file. The frequency of each value of NEWID indicates how many arrest records are included for that person.

ARREST HISTORIES

The data include arrests both prior to and after the current offense and treatment program participation.

CODING FOR SELECTED VARIABLES

MINSENT MINIMUM SENTENCE MONTHS (NY CASES)

The minimum sentence variable contains minimum prison sentence (months) or probation sentence (012, 036, 060 months, 600=lifetime).

MAXSENT MAX SENT MONTHS/DAYS (NY CASES SEE CDBK)

The variable MAXSENT does not use unique units. It uses both months and days as units. The maximum sentence variable contains maximum prison sentence (012-900 months) or jail sentence (001-365 days) with the following special literal sentences:

910-Time served
920-Indeterminate
930-One day to life
940-Life
950-Death
960-Reformatory term
970-Indefinite
980-Intermittent
990-Unspecified

LOS LNGTH STAY-DYS-COMPUTE FROM ARRST EVENT

This is a computed variable whose value depends upon whether the treatment program was located in California or New York. For California sites, the value of LOS further depends on whether the individual was sentenced to jail or prison. For New York sites, the value of LOS further depends on the value of the variable ABSENT.

California Sites:

```
LOS = 2/3 JAIL sentence
    or
LOS = 1/2 PRISON sentence
```

New York Sites:

```
if ABSENT = 2        LOS = MAXSENT*30.5
if ABSENT = 3        LOS = MAXSENT
if ABSENT = 4        LOS = MAXSENT
if ABSENT = 5        LOS = 0
if ABSENT = 7        LOS = 0
if ABSENT = 10       LOS = MAXSENT
if ABSENT = 11       LOS = 0
if ABSENT = 13       LOS = MAXSENT
if LOS    = missing  LOS = 0
```

Users who intend to include the variable LOS in their analyses should examine it carefully by site and by value of JAIL, PRISON, and ABSENT. The coding of LOS does not appear to be consistent for the New York sites based on the above rules.

NCCD NCCD CHARGE CODE
ABSENT SENTENCE TYPE (NY SITES)

The code descriptors for the variables NCCD and ABSENT have been extensively abbreviated. A more complete list of the code descriptors is given below.

CODEBOOK APPENDIX

FREQUENCIES FOR VARIABLE NEWID

The value of NEWID is the unique identification number assigned to each of the 1,428 individuals in the study. The frequency that it occurs is the number of arrest records for that person. There are 8,285 arrest records in total.

NEWID STUDY NUMBER
