STUDY DESCRIPTION

This data set was gathered by George A. Lopez and Jean M. Stern while they were at the International Relations Program at Syracuse University. The goal of the study was a comprehensive data set for comparative analysis of Intergovermental Organizations (IGOs) in the international system.

Data were collected on 240 IGOs active in 1970 according to the 1970-71 edition of the Yearbook of International Organizations.

The 27 variables in the data set are divided into three groups: identification variables (information to help the user locate each IGO in the Yearbook and in the data set), environmental variables (attributes of IGOs which link them to the international system and which do not require judgmental coding), and substantive variables (judgmentally coded variables from the Yearbook on the basis of pre-established conceptual categories and definitions).

CODEBOOK INFORMATION

This documentation consists of 5 sections. The Codebook briefly describes each of the 27 variables and lists coded frequencies. Appendix A provides a list of the abbreviations and names of the 240 Intergovernmental Organizations of the Study. Appendix B is a list of the Nations which compose the major world regions (Variable 6). Appendix C lists the nations which compose the sub-regional clusters (Variable 7). Appendix D shows the column location, width, and missing data codes for the OSIRIS and card-image versions of this data set.
