BIBLIOGRAPHIC CITATION

Publications based on ICPSR data collections should acknowledge those sources by means of bibliographic citations. To ensure that such source attributions are captured for social science bibliographic utilities, citations must appear in footnotes or in the reference section of publications. The bibliographic citation for this data collection is:

> U.S. Dept. of Justice, National Institute of Justice. ARRESTEE DRUG ABUSE MONITORING (ADAM) PROGRAM IN THE UNITED STATES, 2000 [Computer file]. ICPSR version. Washington, DC: U.S. Dept. of Justice, National Institute of Justice [producer], 2001. Ann Arbor, MI: Inter-university Consortium for Political and Social Research [distributor], 2001.

REQUEST FOR INFORMATION ON USE OF ICPSR RESOURCES

To provide funding agencies with essential information about use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, users of ICPSR data are requested to send to ICPSR bibliographic citations for each completed manuscript or thesis abstract. Please indicate in a cover letter which data were used.

DATA DISCLAIMER

The original collector of the data, ICPSR, and the relevant funding agency bear no responsibility for uses of this collection or for interpretations or inferences based upon such uses.

DATA COLLECTION DESCRIPTION

United States Department of Justice. National Institute of Justice
ARRESTEE DRUG ABUSE MONITORING (ADAM) PROGRAM IN THE UNITED STATES, 2000 (ICPSR 3270)

SUMMARY: Beginning in 1996, the National Institute of Justice (NIJ) initiated a major redesign of its multisite drug-monitoring program, the Drug Use Forecasting (DUF) system (DRUG USE FORECASTING IN 24 CITIES IN THE UNITED STATES, 1987-1997 [ICPSR 9477]). The program was retitled Arrestee Drug Abuse Monitoring (ADAM) (see ARRESTEE DRUG ABUSE MONITORING (ADAM) PROGRAM IN THE UNITED STATES, 1998 [ICPSR 2628] and 1999 [ICPSR 2994]). ADAM extended DUF in the number of sites and improved the quality and generalizability of the data. The redesign was fully implemented in all sites beginning in the first quarter of 2000. The ADAM program implemented a new and expanded adult instrument in the first quarter of 2000, which was used for both the male (Part 1) and female (Part 2) data. The juvenile data for 2000 (Part 3) used the juvenile instrument from previous years. The ADAM program also moved to probability-based sampling for the adult male population during 2000. Therefore, the 2000 adult male sample includes weights, generated through post-sampling stratification of the data. The shift to sampling of the adult male population in 2000 required that all 35 sites move to a common catchment area, the county. The core instrument for the adult cases was supplemented by a facesheet, which was used to collect demographic and charge information from official records. Core instruments were used to collect self-report information from the respondent. Both the adult and juvenile instruments were administered to persons arrested and booked on local or state charges relevant to the jurisdiction (i.e., not federal or out-of-county charges) within the past 48 hours. At the completion of the interview the arrestee was asked to voluntarily provide a urine specimen. An external lab used the Enzyme Multiplied Immunoassay Testing (EMIT) protocols to test for the presence of ten drugs or metabolites of the drug in the urine sample. All amphetamine positives were confirmed by gas chromatography/mass spectrometry (GC/MS) to determine whether methamphetamine was used. For the adult data, variables from the facesheet include arrest precinct, ZIP code of arrest location, ZIP code of respondent's address, respondent's gender and race, three most serious arrest charges, sample source (stock, flow, other), interview status (including reason the individual selected in the sample was not interviewed), language of instrument used, and the number of hours since arrest. Demographic information from the core instrument includes respondent's age, ethnicity, residency, education, employment, health insurance coverage, marital status, housing, and telephone access. Variables from the calendar provide information on inpatient and outpatient substance abuse treatment; inpatient mental health treatment; arrests and incarcerations; heavy alcohol use; use of marijuana, crack/rock cocaine, powder cocaine, heroin, methamphetamine, and other drug (ever and previous 12 months); age of first use of the above six drugs and heavy alcohol use; drug dependency in the previous 12 months;

characteristics of drug transactions in past 30 days; use of marijuana, crack/rock cocaine, powder cocaine, heroin, and methamphetamine in past 30 days, 7 days, and 48 hours; heavy alcohol use in past 30 days; and secondary drug use of 15 other drugs in the past 48 hours. Urine test results are provided for 11 drugs -- marijuana, cocaine, opiates, phencyclidine (PCP), benzodiazepines (Valium), propoxyphene (Darvon), methadone, methaqualone, barbiturates, amphetamines, and methamphetamine. The adult data files include several derived variables. The male data also include four sampling weights, and stratum identifications and percents. For the juvenile data, demographic variables include age, race, sex, educational attainment, employment status, and living circumstances. Data also include each juvenile arrestee's self-reported use of 15 drugs (alcohol, tobacco, marijuana, powder cocaine, crack, heroin, PCP, amphetamines, barbiturates, quaaludes, methadone, crystal methamphetamine, Valium, LSD, and inhalants). For each drug type, arrestees reported whether they had ever used the drug, age of first use, whether they had used the drug in the past 30 days and past 72 hours, number of days they used the drug in past month, whether they tried to cut down or quit using the drug, if they were successful, whether they felt dependent on the drug, whether they were receiving treatment for the drug, whether they had received treatment for the drug in the past, and whether they thought they could use treatment for that drug. Additional variables include whether juvenile respondents had ever injected drugs; whether they were influenced by drugs when they allegedly committed the crime for which they were arrested; whether they had been to an emergency room for drug-related incidents, and if so, whether in the past 12 months; and information on arrests and charges in the past 12 months. As with the adult data, urine test results are also provided. Finally, variables covering precinct (precinct of arrest) and law (penal law code associated with the crime for which the juvenile was arrested) are also provided for use by local law enforcement officials at each site.

UNIVERSE: All persons arrested and booked on local and state charges in the 35 ADAM counties in the United States during 2000.

SAMPLING: Part 1: Probability-based sampling, Parts 2-3: Convenience samples.

NOTE: (1) Users are strongly encouraged to obtain copies of the "Methodology Guide for ADAM" and the "Analytic Guide for ADAM" from the ADAM Web site at http://www.adam-nij.net/. (2) The ADAM program changes implemented in 2000 will continue during the 2001 collection. Because of the above changes to the ADAM program, analysts must be careful when comparing previous DUF and ADAM data to the 2000 data, especially for male arrestees. (3) Local area estimates, national estimates, and inferences about the total population of hardcore or heavy drug users, including those not in the current ADAM sample, are possible with the new ADAM sampling design. The latter two items will be described in detail in

forthcoming publications. (4) The user guide, codebooks, and data collection instruments are provided by ICPSR as Portable Document Format (PDF) files. The PDF file format was developed by Adobe Systems Incorporated and can be accessed using PDF reader software, such as the Adobe Acrobat Reader. Information on how to obtain a copy of the Acrobat Reader is provided on the ICPSR Web site.

RESTRICTIONS: Users are advised that starting in October 1998, the National Institute of Justice requested that all data in this collection be restricted and made available only by special arrangement with the staff of the National Archive of Criminal Justice Data (NACJD) at ICPSR. These additional access restrictions to protect confidentiality have become necessary as the revised Drug Use Forecasting (DUF) program, renamed the Arrestee Drug Abuse Monitoring (ADAM) Program in 1997, began moving into smaller cities and continues to collect geographic (ZIP code) and other detailed information. Users interested in obtaining the DUF/ADAM data must request and complete a Data Transfer Agreement Form and fully specify the reasons they need the data. A copy of the Data Transfer Agreement Form can be requested by calling 800-999-0960 or 734-998-9825. The Data Transfer Agreement Form is also available as a Portable Document Format (PDF) file from the NACJD Web site at http://www.icpsr.umich.edu/NACJD/Private/private.pdf. Completed forms should be returned to: Director, National Archive of Criminal Justice Data, Inter-university Consortium for Political and Social Research, Institute for Social Research, P.O. Box 1248, University of Michigan, Ann Arbor, MI 48106-1248, or by fax: 734-998-9905. More information about the DUF/ADAM Programs can be obtained by visiting the ADAM Web site at http://www.adam-nij.net/.

EXTENT OF COLLECTION: 3 data files + machine-readable documentation (PDF) + SAS data definition statements + SPSS data definition statements

EXTENT OF PROCESSING: CONCHK.PR/ UNDOCCHK.PR/ MDATA.PR/ REFORM.DATA/ REFORM.DOC/ SCAN/ UNDOCCHK.ICPSR/ CDBK.ICPSR/ DDEF.ICPSR

DATA FORMAT: Logical Record Length with SAS and SPSS data definition statements

Part 1: Adult Male Arrestee Data With Weights
File Structure: rectangular
Cases: 40,381
Variables: 490
Record Length: 5,641
Records Per Case: 1

Part 2: Adult Female Arrestee Data
File Structure: rectangular
Cases: 9,038
Variables: 482
Record Length: 5,579
Records Per Case: 1

Part 3: Juvenile Arrestee Data
File Structure: rectangular
Cases: 2,529
Variables: 338
Record Length: 1,317
Records Per Case: 1

*** ICPSR CODEBOOK NOTES ***

1) The codebook is structured to provide the variables within categories. The order of the variables in the data, however, follows the survey instrument, with created variables provided near the end of the data file. Appendix A provides a list of the variables as they occur in the data file.

2) Due to the differences in sampling strategies used for the adult male and the adult female and juvenile data collections, the three data sets are not completely comparable. Additionally, because of the changes made to the ADAM program, analysts must be careful when comparing previous DUF and ADAM data to the 2000 data, particularly for males.

3) Some case counts in Parts 1 and 2 are different than those provided in the 2000 Annualized Site Reports. Reasons that the data may differ include: 1) the Anchorage cases not in the annualized report were considered census data and were used to weight the data, but are not part of the sample; 2) if the female total case number was less than 20 (twenty), no annualized report was produced; 3) if gender was coded as "3" the case was not included in the annualized report; and 4) sites with facilities for which the ADAM program did not receive census data for males were not included in annualized reports.

4) For variables STRATA_Q and STRATA_U in the adult male (Part 1) data file, the coding for these variables can be summarized as follows: first character identifies the size of the jail, the number to the left of the underscore provides the jail number, and the number to the right of the underscore provides the stratum. For example: L1_1 is a large jail, with jail number of 1 in stratum 1. Given the small jail rule of one stratum from the flow and three from the stock and a single jail maximum of three strata from the flow and nine from the stock, 1 or 1-3, respectively, will always represent the flow and 2-4 or 4-12, respectively, will always represent the stock. Please refer to the Methodology Guide for ADAM for details on the sampling procedures used for the adult male data collection.

5) The ADAM data may contain up to four missing data codes: 6666 (Facesheet Data Only), 7777 (Not applicable), 8888 (Respondent Refused), and 9999 (Don't Know/Missing). Due to the limitation of the SPSS statistical software to three declared missing data codes (or one code and one range), code 8888 may not be a declared missing code for some variables in the SPSS and SAS data definition statements provided for Parts 1 and 2.

6) Part 1 contains 116 character variables and Part 2 contains 114 character variables. When using SPSS, the MXWARNS limit will need to be increased using a SET command when running some procedures, like frequencies, on the full file.

7) Parts 1 and 2 contain one date variable (COLLECT) and three time variables (STRTTIME, ENDTIME, and PART_TME). Users may elect to change the format for these variables to ADATE10 and TIME5 when using SPSS and MMDDYY10. and TIME5. when using SAS in order to analyze the variables using the statistical packages internal representation of date and time values.

8) ICPSR shortened variable labels to a maximum of 40 characters due to the character limitation for SAS. 'X:Y' was used as a shortened version of 'PROPORTION' or 'PROPORTION OF.'

CODEBOOK FOR ICPSR 3270

ARRESTEE DRUG ABUSE MONITORING (ADAM) PROGRAM
IN THE UNITED STATES, 2000
(PART 3: JUVENILE ARRESTEE DATA)

PLEASE NOTE: The "M" between the code and the code label indicates the code has been designated as a missing value.
