## Workshop Description

This five-day workshop on the Project on Human Development in Chicago Neighborhoods (PHDCN) is designed to provide users of PHDCN data with an overview of the three major components of the study: the Longitudinal Cohort Study, the Community Survey, and the Systematic Social Observation. Presentations by the PHDCN principal investigators and researchers will focus on the key research questions and conceptual framework that has guided their research, as well as the research design and instrumentation used in the study. The lab exercise and small-group projects will provide opportunities for more targeted instruction on various aspects of the PHDCN data.

We will focus on the Longitudinal Cohort Study because it is the most complex of the three data sources and the most recently released. We will also cover the Community Survey and Systematic Social Observation, but in less detail in the formal presentations.

Our goal is to provide an opportunity for participants to get started on their research with guidance from PHDCN researchers. During the five days, participants will be asked to formulate research questions and to put their research into process so that by the end of the workshop they will have research projects already underway and have feedback from PHDCN researchers and other workshop participants.
