Cologne, Germany: Zentralarchiv fur Empirische Sozialforschung/ Ann Arbor, MI: Inter-university Consortium for Political and Social Research [distributors], 2001.

REQUEST FOR INFORMATION ON USE OF ICPSR RESOURCES

To provide funding agencies with essential information about use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, users of ICPSR data are requested to send to ICPSR bibliographic citations for each completed manuscript or thesis abstract. Please indicate in a cover letter which data were used.

DATA DISCLAIMER

The original collector of the data, ICPSR, and the relevant funding agency bear no responsibility for uses of this collection or for interpretations or inferences based upon such uses.

EUROBAROMETER 44.2: WORKING CONDITIONS IN THE EUROPEAN UNION, NOVEMBER 1995-JANUARY 1996 (ICPSR 6722)

SUMMARY: This round of Eurobarometer surveys, which diverged from the standard Eurobarometer topics, queried respondents on their working conditions. Respondents provided general information about their jobs, including occupation, type of contract, years/months in job, wages, hours worked weekly, number of people working under their supervision, and length of commute, as well as size and business activity of the company where they worked. Specific questions about the work environment concerned the amount of exposure to vibrations, noise, high and low temperatures, fumes or other dangerous substances, and radiation. Respondents were also asked whether their jobs involved painful or tiring positions, carrying heavy loads, short repetitive tasks, repetitive hand or arm movements, high speed activity, tight deadlines, computer work, wearing protective equipment, working with non-employees, and working at home, at nights, and on weekends. In addition, respondents were asked if their health and safety were at risk at work, how well informed they were about job risks, and in what ways their work directly affected their health. They also provided information on how many times over the last year they were absent at work because of health problems caused by their jobs. Information was gathered on workers' control of their tasks, including the pace of their work, if their work was dependent on other colleagues or machinery, if they were able to determine the order or methods of their work, and whether their work involved complex or monotonous tasks. Other questions focused on work-related discussions with their boss, colleagues, and employee representatives, and occurrences of personal discrimination, intimidation, or physical violence. Respondents also provided information about training, job satisfaction, and the availability of leave time. Demographic data collected on respondents include gender, age, nationality, marital status, occupation, age at completion of education, number of people in household, number of children under 15 in household, and subjective size of community.

UNIVERSE: Citizens and non-citizens of the EU aged 15 and over residing in the 15 EU member countries: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal, Spain, Sweden, and the United Kingdom (Great Britain only for this study.)

SAMPLING: Multistage national probability samples.

NOTE: The codebook is provided by ICPSR as an ASCII text file and as a Portable Document Format (PDF) file, and the data collection instrument is provided by ICPSR as a PDF file. The PDF file format was developed by Adobe Systems Incorporated and can be accessed using PDF reader software, such as the Adobe Acrobat Reader. Information on how to obtain a copy of the Acrobat Reader is provided on the ICPSR Web site.

EXTENT OF COLLECTION: 1 data file + machine-readable documentation (PDF and text) + SAS data definition statements + SPSS data definition statements + data collection instrument (PDF)

EXTENT OF PROCESSING: CDBK.ICPSR/ CONCHK.ICPSR/ DDEF.ICPSR/ FREQ.ICPSR/ MDATA.ICPSR/ RECODE/ REFORM.DATA/ REFORM.DOC/ SCAN/ UNDOCCHK.ICPSR

DATA FORMAT: Logical Record Length with SAS and SPSS data definition statements

File Structure: rectangular
Cases: 15,986
Variables: 174
Record Length: 241
Records Per Case: 1

INRA

INTERNATIONAL RESEARCH ASSOCIATES

EUROBAROMETER 44.2
TECHNICAL SPECIFICATIONS

Between 27 November, 1995 and 19 January, 1996, INRA (EUROPE), a European Network of Market- and Public Opinion Research agencies, carried out wave 44.2 of the STANDARD EUROBAROMETER, on request of the EUROPEAN COMMISSION, for the European Foundation for the Improvement of Living and Working Conditions.

The EUROBAROMETER 44.2 covers the total active population of the respective nationality of the European Union member countries, aged 15 years and over, resident in each of the Member States. Non-European were also included. The basic sample design applied in all Member States is a multi-stage, random (probability) one. In each EU country, a number of sampling points was drawn with probability proportional to population size (for a total coverage of the country) and to population density.

For doing so, the points were drawn systematically from all "administrative regional units", after stratification by individual unit and type of area. They thus represent the whole territory of the Member States according to the EUROSTAT-NUTS II (or equivalent) and according to the distribution of the resident population of the respective EU-nationalities in terms of metropolitan, urban and rural areas. In each of the selected sampling points, a starting address was drawn, at random. Further addresses were selected as every Nth address by standard random route procedures, from the initial address. In each household, the respondent was drawn, at random. All interviews were face-to-face in people's home and in the appropriate national language.

For each country a comparison between the sample and the universe was carried out. The Universe description was derived from EUROSTAT Labour Force Survey-Results 1993 (LSF) or from national statistics. For all EU member-countries a national weighting procedure, using marginal and intercellular weighting, was carried out based on this Universe description. As such in all countries, minimum sex, age, occupation (ISCO) & sector of activity (NACE), region NUTS II were introduced in the iteration procedure. Sources include in addition to LSF, the EUROSTAT in the Regional Statistics Yearbook of 1994, and the Eurobarometer. For international weighting (i.e. EU averages), INRA (EUROPE) applies the official "persons in employment" figures as published by Labour Force Survey-Results 1993. The total population figures for input in this post-weighting procedure are listed above.

The results of the EUROBAROMETER studies are reported in the form of tables, datafiles and analyses. Per question a table of results is given with the full question text (English and French) on top; the results are expressed 1) as a percentage on total base and 2) as a percentage on the number of "valid" responses (i.e. "Don't Know" and "No Answer" excluded). All EUROBAROMETER datafiles are stored at the Zentral Archiv (Universität Köln, Bachemer Strasse, 40, D-5000 Köln 41). They are at the disposal of all institutes members of the European Consortium for Political Research (Essex), of the Inter-University Consortium for Political and Social Research (Michigan) and of all those interested in social science research. The results of the EUROBAROMETER surveys are analysed and made available through the Unit Survey Research (EUROBAROMETER) of DGX/B of the European Commission, Rue de la Loi 200, B-1049 Brussels.

Readers are reminded that survey results are estimations, the accuracy of which, everything being equal, rests upon the sample size and upon the observed percentage. With samples of about 1.000 interviews, the real percentages vary within the following confidence limits :

Observed percentages	10% or 90%	20% or 80%	30% or 70%	40% or 60%	50%
Confidence limits	± 1.9%	± 2.5%	± 2.7%	± 3.0%	± 3.1%

INTERNATIONAL RESEARCH ASSOCIATES

EUROBAROMETER 44.2
TECHNICAL SPECIFICATIONS

Between 27 November, 1995 and 19 January, 1996, INRA (EUROPE), a European Network of Market- and Public Opinion Research agencies, carried out wave 44.2 of the STANDARD EUROBAROMETER, on request of the EUROPEAN COMMISSION, for the European Foundation for the Improvement of Living and Working Conditions.

The EUROBAROMETER 44.2 covers the total active population of the respective nationality of the European Union member countries, aged 15 years and over, resident in each of the Member States. Non-European were also included. The basic sample design applied in all Member States is a multi-stage, random (probability) one. In each EU country, a number of sampling points was drawn with probability proportional to population size (for a total coverage of the country) and to population density.

For doing so, the points were drawn systematically from all "administrative regional units", after stratification by individual unit and type of area. They thus represent the whole territory of the Member States according to the EUROSTAT-NUTS II (or equivalent) and according to the distribution of the resident population of the respective EU-nationalities in terms of metropolitan, urban and rural areas. In each of the selected sampling points, a starting address was drawn, at random. Further addresses were selected as every Nth address by standard random route procedures, from the initial address. In each household, the respondent was drawn, at random. All interviews were face-to-face in people's home and in the appropriate national language.

COUNTRIES	INSTITUTES	N° INTERVIEWS	FIELDWORKDATES	POPULATION 15+ (x 000)
Belgium	MARKETING UNIT	1019	27/11 - 29/12	3 378

Sweden	TEMO	1058	05/12 - 14/01	4 356
Finland	MARK. DEVELOPMENT CENTER	1062	01/12 - 19/01	2 072

For each country a comparison between the sample and the universe was carried out. The Universe description was derived from EUROSTAT Labour Force Survey-Results 1993 (LSF) or from national statistics. For all EU member-countries a national weighting procedure, using marginal and intercellular weighting, was carried out based on this Universe description. As such in all countries, minimum sex, age, occupation (ISCO) & sector of activity (NACE), region NUTS II were introduced in the iteration procedure. Sources include in addition to LSF, the EUROSTAT in the Regional Statistics Yearbook of 1994, and the Eurobarometer. For international weighting (i.e. EU averages), INRA (EUROPE) applies the official "persons in employment" figures as published by Labour Force Survey-Results 1993. The total population figures for input in this post-weighting procedure are listed above.

The results of the EUROBAROMETER studies are reported in the form of tables, datafiles and analyses. Per question a table of results is given with the full question text (English and French) on top; the results are expressed 1) as a percentage on total base and 2) as a percentage on the number of "valid" responses (i.e. "Don't Know" and "No Answer" excluded). All EUROBAROMETER datafiles are stored at the Zentral Archiv (Universität Köln, Bachemer Strasse, 40, D-5000 Köln 41). They are at the disposal of all institutes members of the European Consortium for Political Research (Essex), of the Inter-University Consortium for Political and Social Research (Michigan) and of all those interested in social science research. The results of the EUROBAROMETER surveys are analysed and made available through the Unit Survey Research (EUROBAROMETER) of DGX/B of the European Commission, Rue de la Loi 200, B-1049 Brussels.

Readers are reminded that survey results are estimations, the accuracy of which, everything being equal, rests upon the sample size and upon the observed percentage. With samples of about 1.000 interviews, the real percentages vary within the following confidence limits :

Observed percentages	10% or 90%	20% or 80%	30% or 70%	40% or 60%	50%
Confidence limits	± 1.9%	± 2.5%	± 2.7%	± 3.0%	± 3.1%
