NOTICE

WARNING CONCERNING COPYRIGHT RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material. Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

Bibliographic Description

ICPSR Study No.: 28142

Title: Sexual Assault Among Latinas (SALAS) Study, May-September 2008 [United States]

Principal Investigator(s): Carlos A. Cuevas, Northeastern University

Chiara Sabina, Pennsylvania State University-Harrisburg

Funding Agency: United States Department of Justice. Office of Justice Programs. National Institute of Justice.

Grant Number: 2007-WG-BX-0051

Bibliographic Citation: Cuevas, Carlos A., and Chiara Sabina. Sexual Assault Among Latinas (SALAS) Study, May-September 2008 [United States]. ICPSR28142-v1. Ann Arbor, MI: Inter-university Consortium for Political and Social Research [distributor], 2012. doi:10.3886/ICPSR28142.v1

Scope of Study

Summary: This Sexual Assault Among Latinas (SALAS) study was designed to examine interpersonal victimization among a national sample of Latino women, particularly focusing on help-seeking behaviors, culturally relevant factors, and psychosocial impacts. A national sample of 2,000 adult Latino women living in the United States participated in the study. An experienced survey research firm with specialization in doing surveys that ask about sensitive subjects conducted interviews between May 28, 2008 and September 3, 2008 using a Computer Assisted Telephone Interview (CATI) system. The data contain a total of 1,388 variables including demographics, victimization history, help-seeking efforts, mental health status, and religious behavior and beliefs variables.

Subject Term(s): acculturation, assault, coping, crime reporting, gender roles, Hispanic or Latino Americans, kidnapping, mental health, post-traumatic stress disorder, psychological effects, psychological wellbeing, rape, reactions to crime, religious behavior, religious beliefs, sex offenses, sexual abuse, sexual assault, sexual harassment, social issues, stalking, threats, victim services, victimization, victims, violence against women, women

Smallest Geographic Unit: county

Geographic Coverage: United States

- Time Period: • May 28, 2008 - September 3, 2008
- Date(s) of Collection: • May 28, 2008 - September 3, 2008
- Unit of Observation: individual
- Universe: All adult Latino women, ages 18 years or older, living in the United States who had a landline phone in their household between May and September of 2008.
- Data Type: clinical data
survey data

Methodology

Purpose of the Study: This study was designed to examine interpersonal victimization among a national sample of Latino women, particularly focusing on help-seeking behaviors, culturally relevant factors, and psychosocial impacts. More specifically, the researchers aimed to fulfill the following research goals:

1. Determine the extent of sexual victimization amongst adult Latino females.
2. Determine the coexistence of other forms of victimization among those sexually victimized.
3. Examine formal service utilization among sexually victimized Latino women.
4. Examine informal help-seeking among sexually victimized Latino women.
5. Examine culturally-relevant factors associated with the experience of and responses to sexual violence.
6. Determine the psychosocial impact of sexual victimization on Latino women.

Study Design: A national sample of 2,000 adult Latino women living in the United States participated in the study. An experienced survey research firm with specialization in doing surveys that ask about sensitive subjects (e.g., interpersonal violence) conducted the interviews in either English or Spanish using a Computer Assisted Telephone Interview (CATI) system. The interviewers were specifically trained on the SALAS survey and closely supervised during the data collection process. Only female interviewers were used since previous surveys using this methodology showed that potential respondents were more likely to participate in the study if the interviewer is a woman. An initial attempt and four callbacks

were made to reach a specific household, and then an additional three calls were made once a case was reached until final disposition was obtained (e.g., a completed survey or refusal). All calls were made between 5pm and 9pm during the weekdays, between 10am and 9pm on Saturdays, and 11am to 9pm on Sundays and all interviews were conducted between May 28, 2008 and September 3, 2008.

Once a respondent was selected, they were read the informed consent and asked if they were willing to participate in the study. If they agreed to participate, they were interviewed at the current time or asked if they wished to be called back at a more convenient time. Before starting the survey questions, participants were given a code phrase to say ("OK, you're welcome") if they needed to suddenly end the call (e.g., due to safety or confidentiality concerns). Participants were then asked the various study instruments in the following order: questions about state of social issues, demographic information, acculturation, lifetime victimization, help-seeking behaviors for the event that took place in the United States that was most upsetting, religiosity, gender role ideology, psychological symptoms, and posttraumatic symptoms. Upon completion of the survey, participants were paid \$10 for their participation

Sample: The study entrance criteria were that participants needed to be women over the age of 18 who self-identified as Latino (either foreign or United States born), and whose primary language was either English or Spanish. To generate a national sample of Latino women living in the United States, probability samples of households with landline telephones were constructed using a random digit dial method (RDD). For this project, the sample was drawn from telephone numbers stratified by Hispanic household density per hundred block. Of the 69,549 numbers dialed in total, 5,075 (7 percent) came from areas with 20 percent or lower Hispanic density, 4,398 (6 percent) were drawn from areas with 21 to 40 percent Hispanic density, 4,183 (6 percent) were drawn from areas with 41 to 60 percent Hispanic density, 3,953 (6 percent) were drawn from areas with 61 to 80 percent Hispanic density, and 51,940 (75 percent) were sampled from areas with 80 percent or higher Hispanic density. 38 percent of these cases sampled yielded working, non-business numbers, while 27 percent were screened out as numbers corresponding to non-Hispanic households or households with no Hispanic females.

The selected houses were contacted between May 28, 2008 and September 3, 2008 by trained, female interviewers from an experienced survey research firm. Telephone numbers that yielded non-residential contacts such as businesses, churches, and college dormitories, were screened out. Only households, i.e., residences in which any number of related individuals or no more than five unrelated persons living together, were eligible for inclusion in the sample. If a residential household was reached, then the interviewer asked about the total

number of age-eligible Latino females in the household. If there was only one eligible individual, that individual was asked to participate; if there was more than one eligible participant, then the "most recent/next birthday" method was used to decide which individual to interview.

In the final sample of 2,000 Latino women, 16 (.8 percent) came from areas with 20 percent or lower Hispanic density, 42 (2 percent) came from areas with 21 to 40 percent Hispanic density, 41 (2 percent) came from areas with 41 to 60 percent Hispanic density, 111 (6 percent) came from areas with 61 to 80 percent Hispanic density and 1,790 (90 percent) came from areas with 80 percent or higher Hispanic density.

Weight: The weighting plan for the survey was a multi-stage sequential process of weighting the achieved sample to correct for sampling and non-sampling biases in the final sample. The first stage in the weighting process was to correct for selection procedures that yielded unequal probability of selection within sampled households. The first stage weight (WEIGHT1) is equal to the number of eligible respondents within the household.

The next step in the weighting process was used to correct the achieved sample for disproportionate sampling by dividing the expected population distribution, based on Census projections, by the achieved sample distribution on the stratification variables. Specifically, the second stage weight corrected the sample to the cell distribution of the population for six age cohorts and nine household income ranges, using the Census Population Projections for Age, Sex and Race for 2007 and the American Community Survey for 2007 for household income projections.

The final step in the weighting process was designed to correct for the fact that the total number of cases in the weighted sample was larger than the unweighted sample size because of the use of the number of eligibles weight. In order to avoid misinterpretation of sample size, the total number of cases in the unweighted sample was divided by the total number of cases in the weighted sample to yield a sample size weight. When this weight is applied, the size of the weighted sample is identical to the size of the unweighted sample.

The final weight (WEIGHT12) incorporates all of the intermediate weighting steps described above. The final weight adjusts the total completed interviews in the achieved sample to correct for known sampling and participation biases, while maintaining the unweighted sample size.

Sources of Information: Northeastern University, Sexual Assault Among Latinas Study (SALAS)

Mode of Data Collection: computer-assisted telephone interview (CATI)

Description of Variables: The data contain a total of 1,388 variables including demographics, state of social issues, victimization history, help-seeking efforts, mental health status, and religious behavior and beliefs variables. Regarding demographics, the dataset has questions on the participant's age, country of origin, citizenship status, preferred language, sexual orientation, education level, employment status, household income, housing status, and relationship status (e.g., married, single, etc). In addition, the data include questions that assess the degree to which participants view discrimination, violent crime, domestic violence, sexual assault and sexual harassment as problems in society. The survey also asks questions about stalking, physical assaults, weapon assaults, physical assaults in childhood, threats, threats with weapons, sexual assault, attempted sexual assault, sexual fondling, kidnapping, and witnessed victimization. Moreover, the data contain information on the actions taken by respondents following victimization, including formal (e.g., reporting to police, getting medical care, seeking legal remedies) and informal (e.g., talking to friends, family, or the clergy) forms of help-seeking. Lastly, the dataset includes variables on respondent religiosity/spirituality, acculturation and minority/majority cultural identities, sex role characteristics, psychological symptoms, and posttraumatic and trauma related symptomatology.

Response Rates: The minimum response rate for the sample was 30.7 percent and minimum cooperation rate was 53.7 percent. The refusal rate for the sample was 20.8 percent. Rate calculations were based on standard American Association for Public Opinion Research formulas.

Presence of Common Scales:

- State of Social Issues Questionnaire (SSIQ) was developed specifically for this survey to evaluate the participants' view of how much of a problem discrimination, violent crime, domestic violence, sexual assault and sexual harassment were in society.
- Lifetime Trauma and Victimization History (LTVH) was used to evaluate lifetime victimization using an adapted version of the Lifetime Trauma and Victimization History questionnaire.
- Help-Seeking Questionnaire (HSQ) was developed to investigate the actions taken by respondents after victimization.
- Brief Multidimensional Measure of Religiousness/Spirituality (BMMRS) was developed to measure religiosity.
- Brief Acculturation Rating Scale of Mexican-Americans-II (Brief ARSMA-II) was used to evaluate participant acculturation.
- Short Bem Sex Role Inventory (BSRI-Short Form) was used to measure sex-typed personality characteristics.
- Trauma Symptom Inventory (TSI) was used to assess trauma-related symptomatology. For this study, researchers used the Anxious Arousal, Depression, Anger/Irritability, and Dissociation scales of the TSI.
- Posttraumatic Stress Disorder Checklist (PCL) was used to assess trauma-related symptomatology.

Extent of Processing: Created variable labels and/or value labels.
Checked for undocumented or out-of-range codes.

Access and Availability

Note: A list of the data formats available for this study can be found in the [summary of holdings](#). Detailed file-level information (such as record length, case count, and variable count) is listed in the [file manifest](#).

Restrictions: The data are restricted from general dissemination. Users interested in obtaining these data must complete a Restricted Data Use Agreement form and specify the reasons for the request. A copy of the Restricted Data Use Agreement form can be requested by calling 800-999-0960. Researchers can also download this form as a Portable Document Format (PDF) file from the download page associated with this dataset. Completed forms should be returned to: Director, National Archive of Criminal Justice Data, Inter-university Consortium for Political and Social Research, Institute for Social Research, P.O. Box 1248, University of Michigan, Ann Arbor, MI 48106-1248, or by fax: 734-647-8200.

NIJ Data Resources Program

About the DRP: The National Institute of Justice Data Resources Program (DRP) makes datasets from NIJ-funded research and evaluation projects available to the research community and sponsors research and training activities devoted to secondary data analysis. Datasets are archived by the National Archive of Criminal Justice Data (NACJD) at the Inter-university Consortium for Political and Social Research (ICPSR) at the University of Michigan.

The NACJD maintains a World Wide Web site with instructions for transferring files and sending messages. Criminal justice data funded by the Department of Justice are available via the Internet at this site at no charge to the user. NACJD may be contacted at NACJD/ICPSR, P.O. Box 1248, Ann Arbor, MI, 48106-1248, 800-999-0960. The URL for the NACJD Web site is:

Data Completeness Report

Notes: (1) Variables are individually listed only if they have greater than 5% missing data. These variables are listed under the appropriate percentage category in the order in which they appear in the data file. (2) The Data Completeness Report only captures information about system missing or other values that are declared missing. Codes that have a label implying that they are missing but that are not declared missing values are not reflected in this report. Data users should consult the codebook for more specific information about missing values. (3) Some variables that have 100% missing data may have been blanked by ICPSR to protect respondent confidentiality. Data users should consult the codebook for more specific information about blanked variables. (4) Data do not contain skip patterns or skip patterns are not reflected in the data as coded.

Table 1: Distribution of Variables by Percentage of Missing Values

Variable Name and Label (Total Cases = 2000)	Percent of Cases with Missing Values
21.3% (295 of 1388 variables)	have 0% Missing Values
7.5% (104 of 1388 variables)	have 0% - 1% Missing Values

LF3_L9A4	PERP FOR L9 IN ADULTHOOD- OTHER RELATIVE	100.0%
LF3_L9A7	PERP FOR L9 IN ADULTHOOD- MULTIPLE	100.0%
LF3_L9P1	PERP FOR L9 IN PREADOLESCENCE- PARTNER/SPOUSE	100.0%
LF3_L9P6	PERP FOR L9 IN PREADOLESCENCE- STRANGER	100.0%
LF3_L10C7	PERP FOR L10 IN CHILDHOOD- MULTIPLE	100.0%
LF3_L10A2	PERP FOR L10 IN ADULTHOOD- PARENT	100.0%
LF3_L10A7	PERP FOR L10 IN ADULTHOOD- MULTIPLE	100.0%
LF3_L10P1	PERP FOR L10 IN PREADOLESCENCE- PARTNER/SPOUSE	100.0%

Table 1: Distribution of Variables by Percentage of Missing Values

Variable Name and Label (Total Cases = 2000)		Percent of Cases with Missing Values
LF3_L10P7	PERP FOR L10 IN PREADOLESCENCE- MULTIPLE	100.0%
LF3_L10T3	PERP FOR L10 IN ADOLESCENCE- SIBLING	100.0%
LF3_L10T7	PERP FOR L10 IN ADOLESCENCE- MULTIPLE	100.0%
LF3_L11C3	PERP FOR L11 IN CHILDHOOD- SIBLING	100.0%
LF3_L11C7	PERP FOR L11 IN CHILDHOOD- MULTIPLE	100.0%
LF3_L11A2	PERP FOR L11 IN ADULthood- PARENT	100.0%
LF3_L11A3	PERP FOR L11 IN ADULthood- SIBLING	100.0%
LF3_L11A7	PERP FOR L11 IN ADULthood- MULTIPLE	100.0%
