INTRODUCTION

DATA COLLECTION DESCRIPTION

     MONITORING THE FUTURE: A CONTINUING STUDY OF AMERICAN
YOUTH, 1999, which is conducted by the University of Michigan's
Institute for Social Research and receives its core funding
from the National Institute on Drug Abuse, is an unusually
comprehensive research project in several respects: surveys
are conducted annually on an ongoing basis; the samples are
large and nationally representative; and the subject matter
is very broad, encompassing some 1400 variables per year.

     The Monitoring the Future Project is designed to explore
changes in many important values, behaviors, and lifestyle
orientations of contemporary American youth. Two general
types of tasks may be distinguished. The first is to
provide a systematic and accurate "description" of the youth
population of interest in a given year, and to quantify the
direction and rate of the changes taking place among them
over time. The second task, more analytic than descriptive,
involves the "explanation" of the relationships and trends
observed to exist.

DATA COLLECTION PROCEDURES

     The basic research design involves annual data
collections from high school seniors during the spring of
each year, beginning with the class of 1975. Each data
collection takes place in approximately 130 public and
private high schools selected to provide an accurate
cross-section of high school seniors throughout the United
States.

     One limitation in the design is that it does not include
in the target population those young men and women who drop
out of high school before graduation (or before the last few
months of the senior year, to be more precise). This
excludes a relatively small proportion of each age cohort --
between 15 and 20 percent -- though not an unimportant
segment, since certain behaviors, such as illicit drug use
and delinquency tend to be higher than average in this
group. However, the addition of a representative sample of
dropouts would increase the cost of the present research
enormously, because of their dispersion and generally higher
level of resistance to being located and interviewed.

     For the purposes of estimating characteristics of the
entire age group, the omission of high school dropouts does
introduce certain biases; however, their small proportion
sets outer limits on the bias. For the purposes of
estimating "changes" from one cohort of high school seniors
to another, the omission of dropouts represents a problem only
if different cohorts have considerably different proportions

who drop out. There is no reason to expect dramatic changes in those rates for the foreseeable future, and recently published government statistics indicate a great deal of stability in dropout rates since 1970.

Some may use this high school data to draw conclusions about changes for the entire age group. While the investigators do not encourage such extrapolation, they suspect that the conclusions reached often would be valid, since over 80 percent of the age group is in the surveyed segment of the population and changes among those not in school are likely to parallel the changes among those who are.

SAMPLING INFORMATION

The procedure for securing a nationwide sample of high school seniors is a multi-stage one. Stage 1 is the selection of particular geographic areas, Stage 2 is the selection of one or more high schools in each area, and Stage 3 is the selection of seniors within each high school.

STAGE 1: GEOGRAPHIC AREAS. The geographic areas used in this study are the primary sampling units (PSUs) developed by the Sampling Section of the Survey Research Center for use in the Center's nationwide interview studies. Because these same PSUs are used for personal interview studies by the Survey Research Center (SRC), local field representatives can be assigned to administer the data collections in practically all schools.

STAGE 2: SCHOOLS. In the major metropolitan areas more than one high school is often included in the sampling design; in most other sampling areas a single high school is sampled. In all cases, the selections of high schools are made such that the probability of drawing a school is proportionate to the size of its senior class. The larger the senior class (according to recent records), the higher the selection probability assigned to the high school. When a sampled school is unwilling to participate, a replacement school as similar to it as possible is selected from the same geographic area.

STAGE 3: STUDENTS. Within each selected school, up to about 400 seniors may be included in the data collection. In schools with fewer than 400 seniors, the usual procedure is to include all of them in the data collection. In larger schools, a subset of seniors is selected either by randomly sampling classrooms or by some other random method that is convenient for the school and judged to be unbiased. Sample weights are assigned to each respondent so as to take account of variations in the sizes of samples from one school to another, as well as the (smaller) variations in selection probabilities occurring at the earlier stages of sampling.

For a table of the sample size and student response rates see Appendix B.

One other important feature of the base-year sampling procedure should be noted here. All schools (except for half of the initial 1975 sample) are asked to participate in two data collections, thereby permitting replacement of half of the total sample of schools each year. One motivation for requesting that schools participate for two years is administrative efficiency; it is a costly and time-consuming procedure to secure the cooperation of schools, and a two-year period of participation cuts down that effort substantially. Another important advantage is that whenever an appreciable shift in scores from one graduating class to the next is observed, it is possible to check whether the shift might be attributable to some differences in the newly sampled schools. This is done simply by repeating the analysis using only the 60 or so schools which participated both years. Thus far, the half-sample approach has worked quite well and examination of drug prevalence data from the "matched half-samples" showed that the half samples of repeat schools yielded drug prevalence trends which were virtually identical to trends based on all schools.

SCHOOL RECRUITING PROCEDURES. Early during the fall semester an initial contact is made with each sampled school. First, a letter is sent to the principal describing the study and requesting permission to survey seniors. The letter is followed by a telephone call from a project staff member, who attempts to deal with any questions or problems and (when necessary) makes arrangements to contact and seek permission from other school district officials. Basically the same procedures are followed for schools asked to participate for the second year.

Once the school's agreement to participate is obtained, arrangements are made by phone for administering the questionnaires. A specific date for the survey is mutually agreed upon and a local SRC representative is assigned to carry out the administration.

ADVANCE CONTACT WITH TEACHERS AND STUDENTS. The local SRC representative is instructed to visit the school two weeks ahead of the actual date of administration. This visit serves as an occasion to meet the teachers whose classes will be affected and to provide them with a brochure describing the study, a brief set of guidelines about the questionnaire administration, and a supply of flyers to be distributed to the students a week to 10 days in advance of the questionnaire administration. The guidelines to the teachers include a suggested announcement to students at the time the flyers are distributed.

From the students' standpoint, the first information about the study usually consists of the teacher's announcement and the short descriptive flyer. In announcing

the study, the teachers are asked to stress that the questionnaires used in the survey are not tests, and that there are no right or wrong answers. The flyer tells the students that they will be invited to participate in the study, points out that their participation is strictly voluntary, and stresses confidentiality (including a reference to the fact that the Monitoring the Future project has a special government grant of confidentiality which allows their answers to be protected). The flyer also serves as an informative document which the students can show to their parents.

QUESTIONNAIRE ADMINISTRATION. The questionnaire administration in each school is carried out by the local SRC representatives and their assistants, following standardized procedures detailed in a project instruction manual. The questionnaires are administered in classrooms during normal class periods whenever possible, although circumstances in some schools require the use of larger group administrations. Teachers are not asked to do anything more than introduce the SRC staff members and (in most cases) remain in the classroom to help guarantee an orderly atmosphere for the survey. Teachers are urged to avoid walking around the room, so that students may feel free to write their answers without fear of being observed.

The actual process of completing the questionnaires is quite straightforward. Respondents are given sharpened pencils and asked to use them because the questionnaires are designed for automatic scanning. Most respondents can finish within a 45 minute class period; for those who cannot, an effort is made to provide a few minutes of additional time.

PROCEDURES FOR PROTECTING CONFIDENTIALITY. In any study that relies on voluntary reporting of drug use or other illegal acts, it is essential to develop procedures which guarantee the confidentiality of such reports. It is also desirable that these procedures be described adequately to respondents so that they are comfortable about providing honest answers.

The first information given to students about the survey consists of a descriptive flyer stressing the confidentiality and voluntary participation. This theme is repeated at the start of the questionnaire administration. Each participating student is instructed to read the message on the cover of the questionnaire, which stresses the importance and value of the study, notes that answers will be kept strictly confidential, states that the study is completely voluntary, and tells the student "If there is any question you or your parents would find objectionable for any reason, just leave it blank." The instructions then point out that in a few months a summary of nationwide results will be mailed to all participants and also that a follow-up questionnaire will be sent to some students after a year. The cover message explains that these are the reasons for asking that name

and address be written on a special form which will be
removed from the questionnaire and handed in separately.
The message also points out that the two different code
numbers (one on the questionnaire and one on the
tear-out form) cannot be matched except by a special computer
tape at the University of Michigan.

        In order to protect the confidentiality of responses and
the identity of respondents, a number of alterations have
been made in the original dataset to prepare it for public
release; these alterations are described later in the
section "Processing Information."

                CONTENT AREAS AND QUESTIONNAIRE DESIGN

        Drug use and related attitudes are the topics which
receive the most extensive coverage in the Monitoring the
Future project; but the questionnaires also deal with a wide
range of other subject areas, including attitudes about
government, social institutions, race relations, changing
roles for women, educational aspirations, occupational aims,
and marital and family plans, as well as a variety of
background and demographic factors.

        Year-to-year questionnaire item additions and deletions may
Be Identified by checking the Monitoring the Future Grade 12
Question Index. Please refer to this appendix under the
Monitoring the Future "Reports and Related Sites" link on the
SAMHDA Web site.

                    MEASUREMENT CONTENT AREAS
_____

_____

A.   DRUGS. Drug use and related attitudes and beliefs, drug
     availability and exposure, surrounding conditions and social
     meaning of drug use. Views of significant others regarding
     drugs.

B.   EDUCATION. Educational lifestyle, values, experiences, and
     environments.

C.   WORK AND LEISURE. Vocational values, meaning of work and
     leisure, work and leisure activities, preferences regarding
     occupational characteristics and type of work setting.

D.   SEX ROLES AND FAMILY. Values, attitudes, and expectations
     about marriage, family structure, sex roles, and sex
     discrimination.

E.   POPULATION CONCERNS. Values and attitudes about overpopulation
     and birth control.

F.   CONSERVATION, MATERIALISM, EQUITY, ETC. Values, attitudes,
     and expectations related to conservation, pollution,
     materialism, equity, and the sharing of resources.
     Preferences regarding type of dwelling and urbanicity.

G. RELIGION. Religious affiliation, practices, and views.

H. POLITICS. Political affiliation, activities, and views.

I. SOCIAL CHANGE. Values, attitudes, and expectations about
    social change.

J. SOCIAL PROBLEMS. Concern with various social problems
    facing the nation and the world.

K. MAJOR SOCIAL INSTITUTIONS. Confidence in and commitment
    to various major social institutions (business, unions,
    branches of government, press, organized religion, military,
    etc.).

L. MILITARY. Views about the armed services and the use of
    military force. Personal plans for military service.

M. INTERPERSONAL RELATIONSHIPS. Qualitative and quantitative
    characteristics of cross-age and peer relationships.
    Interpersonal conflict.

N. RACE RELATIONS. Attitudes toward and experiences with
    other racial groups.

O. CONCERN FOR OTHERS. Concern for others; voluntary and
    charitable activities.

P. HAPPINESS. Happiness and life satisfaction, overall and
    in specific life domains.

Q. OTHER PERSONALITY VARIABLES. Attitudes about self
    (including self-esteem), locus of control, loneliness,
    risk-taking, trust in others, importance placed on various
    life goals, counterculture orientation, hostility.

R. BACKGROUND. Demographic and family background characteristics,
    living arrangements.

S. DEVIANT BEHAVIOR AND VICTIMIZATION. Delinquent behaviors,
    driving violations and accidents (including those under the
    influence of drugs), victimization experiences.

T. HEALTH. Health habits, somatic symptoms, medical treatment.
_____
_____

     Given this breadth of content, the study is not
presented to respondents as a "drug use study," nor do they
tend to view it as such.

     Because many questions are needed to cover all of these
topic areas, much of the questionnaire content is divided
into different questionnaire forms which are distributed to
participants in an ordered sequence. (Five forms were used
in 1975-88; a sixth form was added in 1989.) This sequence
produces five or six virtually identical subsamples. About

one-third of each questionnaire form consists of key or
"core" variables which are common to all forms. All
demographic variables and some measures of drug use are
included in this "core" set of measures. This use of the
full sample for drug and demographic measures provides a
more accurate estimation on these dimensions and also makes
it possible to link them statistically to all the other
measures which are included in a single form only.

                 REPRESENTATIVENESS AND VALIDITY

       The samples for this study are intended to be
representative of high school seniors throughout the 48
coterminous states. We have already discussed the fact that
this definition of the sample excludes one important portion
of the age cohort: those who have dropped out of high
school before nearing the end of the senior year. But given
the aim of representing high school seniors, it will now be
useful to consider the extent to which the obtained samples
of schools and students are likely to be representative of
all seniors and the degree to which the data obtained are
likely to be valid.

       It is possible to distinguish at least four ways in
which survey data of this sort might fall short of being
fully representative. First, some sampled schools refuse to
participate, which could introduce some bias. Second, the
failure to obtain questionnaire data from 100 percent of the
students sampled in participating schools would also
introduce bias. Third, the answers provided by
participating students are open to both conscious and
unconscious distortions which could reduce validity.
Finally, limitations in sample size and/or design could
place limits on the accuracy of estimates.

       SCHOOL PARTICIPATION. As noted in the description of
the sampling design, schools are invited to participate in
the study for a two-year period. With very few exceptions,
each school which has participated for one data collection
has agreed to participate for a second. Thus far, from 66
percent to 80 percent of the original schools invited to
participate have agreed to do so each year; for each school
refusal, a similar school (in terms of size, geographic
area, urbanicity, etc.) was recruited as a replacement. The
selection of replacement schools almost entirely removes
problems of bias in region, urbanicity, and the like that
might result from certain schools refusing to participate.
Other potential biases are more subtle, however. For
example, if it turned out that most schools with "drug
problems" refused to participate, that would seriously bias
the drug estimates derived from the sample. And if any
other single factor were dominant in most refusals, that
also might suggest a source of serious bias. In fact,
however, the reasons for schools' refusals to participate
are varied and largely a function of happenstance events of
the particular year. Thus, the investigators feel fairly

confident that school refusals have not seriously biased the surveys.

STUDENT PARTICIPATION. Completed questionnaires are obtained from three-fourths to four-fifths of all students sampled. The single most important reason that students are missed is that they are absent from class at the time of data collection, and in most cases it is not workable to schedule a special follow-up data collection for them. Students with fairly high rates of absenteeism also report above-average rates of drug use; therefore, there is some degree of bias introduced by missing the absentees. That bias could be corrected through the use of special weighting; however, this course was not chosen because the bias in estimates (in drug use, where the potential effect was hypothesized to be largest) was determined to be quite small and because the necessary weighting procedures would have introduced undesirable complications. In addition to absenteeism, student nonparticipation occurs because of schedule conflicts with school trips and other activities which tend to be more frequent than usual during the final months of the senior year. Of course, some students refuse to complete or turn in a questionnaire. However, SRC representatives in the field estimate this proportion to be only about one percent.

VALIDITY OF SELF-REPORT DATA. Survey measures of delinquency and of drug use depend upon respondents reporting what are, in many cases, illegal acts. Thus, a critical question is whether such self-reports are likely to be valid. Like most studies dealing with these areas, the present study does not include direct, objective validation of the present measures; however, the considerable amount of inferential evidence which exists strongly suggest that the self-report questions produce largely valid data. A number of factors have given the investigators reasonable confidence about the validity of the responses to what are presumably among the most sensitive questions in the study: a low non-response rate on the drug questions; a large proportion admitting to some illicit drug use; the consistency of findings across several years of the present study; strong evidence of construct validity (based on relationships observed between variables); a close match between these data and the findings from other studies using other methods; and the findings from several methodological studies which have used objective validation methods.

As for others of the measures, a few have a long and venerable history -- as scholars of the relevant literature will recognize -- though some of these measures have been modified to fit the present questionnaire format. Many questions, however, have been developed specifically for this project through a process of question writing, pilot testing, pretesting, and question revision or elimination. Some have already been included in other publications from the study, but many have not; therefore, there exists little empirical evidence of their validity and reliability.

ACCURACY OF THE SAMPLE. A sample survey never can provide the same level of accuracy as would be obtained if the entire target population were to participate in the survey -- in the case of the present study, about 2.5-3.0 million seniors per year. But perfect accuracy of this sort would be extremely expensive and certainly not worthwhile considering the fact that a high level of accuracy can be provided by a carefully designed probability sample. The accuracy of the sample in this study is affected both by the size of the student sample and by the number of schools in which they were clustered. For the purposes of this introduction, it is sufficient to note that virtually all estimates based on the total sample have confidence intervals of +/- 1.5 percentage points or smaller - sometimes considerably smaller. This means that, had the project been able to invite all schools and all seniors in the 48 contiguous states to participate, the results from such a massive survey would be within an estimated 1.5 percentage points from the present sample findings 95 times out of 100. This is a quite high level of accuracy, and one that permits the detection of fairly small trends from one year to the next.

Because of the complex sampling design, standard means of assessing confidence intervals are not appropriate. The annual volumes from the project can provide information which allow the analyst to determine the confidence intervals around means and percentages for both the total sample and various subgroups. They also provide tables and guidelines for testing the statistical significance of differences between subgroups, and the significance of year-to-year changes.

CONSISTENCY AND THE MEASUREMENT OF TRENDS. One other point is worth noting in a discussion of the validity of the findings. The Monitoring the Future project is, by intention, a study designed to be sensitive to changes from one time to another. Accordingly, the measures and procedures have been standardized and applied consistently across each data collection. To the extent that any biases remain because of limits in school and/or student participation, and to the extent that there are distortions (lack of validity) in the responses of some students, it seems very likely that such problems will exist in much the same way from one year to the next. In other words, biases in the survey estimates should tend to be consistent from one year to another, which means that the measurement of trends should be affected very little by such biases.

INTERPRETING RACIAL DIFFERENCES. Ethnic identification is provided for the two largest racial/ethnic subgroups in the population -- those who identify themselves as white or Caucasian and those who identify themselves as black or African American. Identification is not given for the other ethnic categories (Native Americans, Asian Americans, Mexican American, Puerto Rican American, or other Latin American) since each of these groups comprises a small proportion of the sample in any given year, which means that

their small Ns (in combination with their clustered groupings in a limited number of schools) would yield estimates which would be too unreliable. In fact, even African Americans -- who constitute approximately 12 percent of each year's sample -- are represented by only 350 to 425 respondents per year on any single questionnaire form. Further, because our sample is a stratified clustered sample, it yields less accuracy than would be yielded by a pure random sample of equal size (see Appendix B of the annual volumes for details). Therefore, because of the limited number of cases, the margin of sampling error around any statistic describing African Americans is larger than for most other subgroups.

There exists, however, a way to determine the replicability of any finding involving racial comparisons. Since most questions are repeated from year to year, one can readily establish the degree to which a finding is replicated by looking at the results in prior and subsequent years. Given the relatively small Ns for African Americans, the analyst is urged to seek such replication before putting much faith in the reliability of any particular racial comparison.

There are factors in addition to reliability, however, which could be misleading in the interpretation of racial differences. Given the social importance which has been placed on various racial differences reported in the social science literature, the investigators would like to caution the analyst to consider the various factors which could account for differences. These factors fall into three categories: differential representation in the sample, differential response tendencies, and the confounding of race with a number of other background and demographic characteristics.

DIFFERENTIAL REPRESENTATION. Census data characterizing American young people in the approximate age range of those in this sample show somewhat lower proportions of African Americans than whites remain in school through the end of the twelfth grade. Therefore, a slightly different segment of the African American population than of the white population resides in the target population of high school seniors. Further, the samples appear to underrepresent slightly those African American males who, according to census figures, are in high school at the twelfth grade level. Identified African American males comprise about 6 percent of the sample, whereas census data suggest that they should comprise around 7 percent. Therefore it appears that more African American males are lost from the target population than white males or females of either race. This may be due to generally poorer attendance rates on the part of some African American males and/or an unwillingness on the part of some to participate in data collections of this sort.

In sum, a smaller segment of the African American population than of the white population of high school age is represented by the data contained here. Insofar as any characteristic is

associated with being a school dropout or absentee, it is likely
to be somewhat disproportionately underrepresented among African
Americans in the sample.

DIFFERENTIAL RESPONSE TENDENCIES. In examining the full
range of variables, racial differences in response tendencies
have been noted. First, the tendency to state agreement in
response to agree-disagree questions is generally somewhat greater
among African Americans than among whites. For example, African
Americans tend to agree more with the positively worded items in
the index of self-esteem, but they also tend to agree more with
the negatively worded items. As it happens, that particular
index has an equal number of positively and negatively worded
items, so that any overall "agreement bias" should be self-
cancelling when the index score is computed. However, group
differences in agreement bias are likely to affect results on
questions employing the agree-disagree format. Fortunately,
most of the questions are not of that type.

There has also been observed a somewhat greater than
average tendency for African American respondents to select
extreme answer categories on attitudinal scales. For example,
even if the same proportion of African Americans as whites felt
positively (or negatively) about some subject, fewer of the
whites are likely to say they feel very positively (or negatively).
The analyst should be aware that differences in responses to
particular questions may be related to these more general
tendencies.

A somewhat separate issue in response tendency is a
respondent's willingness to answer particular questions.
The missing data rate may reflect willingness to answer
particular questions. If a particular question or set of
questions has a missing data rate higher than is true for the
prior or subsequent questions, then presumably more respondents
than usual were unwilling (or perhaps unable) to answer it.
Such an exaggerated missing data rate exists for African
American males on the set of questions dealing with the
respondent's own use of illicit drugs. Clearly a respondent's
willingness to be candid on such questions depends on his or her
trust of the research process and of the researchers themselves.
The exaggerated missing data rates for African American males in
these sections may reflect, at least in part, less trust. The
analyst is advised to check for exceptional levels of missing
data when making comparisons on any variable in which candor
is likely to be reduced by lower system trust. One bit of
additional evidence related to trust in the research process
is that higher proportions of African Americans than whites
reported that if they had used marijuana or heroin they would
not have been willing to report it in the survey.

COVARIANCE WITH OTHER FACTORS. Some characteristics
such as race are highly confounded (correlated) with other
variables -- variables which may in fact explain some
observed racial differences. Put another way, at the
aggregate level we might observe a considerable racial
difference on some characteristic, but once we control for

some background characteristic such as socio-economic level
or region of the country -- that is, once we compare the
African American respondents with whites who come from similar
backgrounds -- there may be no racial difference at all.

Race is correlated with important background and
demographic variables. A higher proportion of African Americans
live in the South and a higher proportion grew up in families
with the mother and/or father absent, and more had mothers
who worked while they were growing up. A substantially
higher proportion of African Americans are Baptists, and
African Americans tend to attribute more importance to
religion than do whites. A higher proportion of African
American respondents have children, and on the average they
are slightly older than the white sample. As was mentioned
earlier African American males are more underrepresented in
our sample than African American females.

These differences in background, demographic, and
ascriptive characteristics are noted because, in any attempt
to understand why a racial difference exists, one would want
to be able to examine the role of these covarying
characteristics.

WEIGHTING INFORMATION

The codebook frequencies have been weighted using variable V5.

FILE STRUCTURE

MONITORING THE FUTURE: A CONTINUING STUDY OF AMERICAN
YOUTH, 1999 is available from ICPSR as seven logical record
length datasets. Each dataset consists of SAS and SPSS data
definition statements containing all technical information for
each variable in the corresponding datafile, and the datafile
itself. The data are sorted by case. The datasets are
organized by the form number (questionnaire version) used.

part #	form	#variables	logical record length	unweighted N
Part 1	Core	108	224	14056
Part 2	Form 1	615	1237	2346
Part 3	Form 2	330	667	2345
Part 4	Form 3	361	729	2347
Part 5	Form 4	281	569	2321
Part 6	Form 5	317	641	2343
Part 7	Form 6	334	675	2354

The SAS and SPSS data definition statements give the
format and other information for each variable in the data
file. See the section "Codebook Information" for further
details. The data file is constructed with a single logical
record for each case.

CODEBOOK INFORMATION

      The codebook is arranged by question numbers which do
not coincide with the variable numbers.

      The example below is a reproduction of information
appearing in the machine-readable codebook for a typical
variable. The numbers in brackets do not appear but are
references to the descriptions which follow this example.

      [1]   Indicates the variable number. A variable number is assigned to
             each variable in the data collection.

      [2]   Indicates the abbreviated variable name used to identify the
             variable for the user.

[3]   This is the full text (question) supplied by the investigator to
        describe this (section of) variable(s). The question text and the
        numbers and letters that may appear at the beginning reflect the
        original wording of the questionnaire item.

[4]   Indicates the weighted percentage distribution of each code value
        for this variable excluding cases where the value is missing.

[5]   Indicates the weighted percentage distribution of each code value
        for this variable including cases where the value is missing.

[6]   Indicates the weighted frequency of occurrence of each code value
        for this variable.

[7]   Indicates the code values occurring in the data for this variable.

[8]   Indicates the textual definitions of the codes for this variable.

[9]   Indicates the total of the valid case percentages (100%).

[10]   Indicates the total of all case percentages (100%).

[11]   Indicates the number of cases (weighted) for this variable
        (including the missing cases).

[12]   Indicates the variable type. NUMERIC variables contain numbers
        only, including numbers in E-notation, a decimal point or a minus
        sign. CHARACTER variables can be any special characters:
        underscores (_), pound signs (#), and ampersands (&).

[13]   Indicates the number of decimal places in the variable.

[14]   Indicates the code values of missing data. In this example, code
        values equal to 9 are missing data (MD Codes: 9). Some analysis
        software packages require that certain types of data which the user
        desires to be excluded from analysis be designated as "MISSING
        DATA," e.g., inappropriate, unascertained, unascertainable, or
        ambiguous data categories. Although these codes are defined as
        missing data categories, this does not mean that the user should not
        or cannot use them in a substantive role if so desired.

[15]   Indicates starting and ending column locations of this variable. In
        this example, the variable named "991A13 KIND OF PAID JOB" begins
        in the 98th and ends in the 99th column within the record.

                    ICPSR PROCESSING INFORMATION

     The data collection was processed according to the
standard ICPSR processing procedures. The data were checked
for illegal or inconsistent code values which, when found,
were recoded to missing data values. Consistency checks
were performed. Statements bracketed in "<" and ">" signs
in the body of the codebook were added by the processors for
explanatory purposes. Statements bracketed in "[" and "]"
were added to the tables provided by the PI, but did not
appear in the questionnaire.

In order to protect the confidentiality of responses and
the identity of respondents, a number of alterations and
omissions have been made in the original dataset to prepare
it for public release. Some questions have been eliminated
from the dataset altogether (e.g., birth month, school, city,
state, and student i.d. numbers; previously Variable Numbers
2, 6-12, 14-15, and 149). Other items have been left in the
dataset but altered to "collapsed" or "bracketed" forms.
Race (Var. No. 151) is now grouped as white/African American/
missing data. Sampling weight (Var. No. 5), which originally
had a distinct value for each school, now is assigned one of six
grouped values. Number of Older Brothers and Sisters, and Number
of Younger Brother and Sisters (Var. Nos. 75 & 76) have been
combined into a simple Number of Siblings variable. Users
interested in analyses involving these items in their original
form should contact the investigators.

NOTE: THE "cases(Wtd)" IN THE CODEBOOK INCLUDES MISSING DATA
        ON THE QUESTION INVOLVED.

The N sizes and the percentage distributions are the result
of using a weight variable, V5. For reasons of confidentiality,
this variable was altered from its full version to a bracketed
version prior to public distribution of the data; THIS RESULTS
IN SLIGHT DISCREPANCIES BETWEEN THE PERCENTAGES AND N SIZES IN
THE ANNUAL ISR VOLUMES AND IN THE PUBLIC USE DATASETS.
Typically, the variation is less than 1%.

ICPSR PROCESSOR NOTE: Selected variables were omitted from the
Western region questionnaires and have been noted in each codebook.

```

Tranquilizers are sometimes prescribed by doctors to calm
        people down, quiet their nerves, or relax their muscles.
        Librium, Valium, and Miltown are all tranquilizers. On
        how many occasions (if any) have you taken tranquilizers
        on your own-that is, without a doctor telling you to take
        them...

...during the last 30 days?

APPENDIX A

PUBLICATIONS

ANNUAL VOLUMES CONTAINING COMPLETE RESPONSE DISTRIBUTIONS

(Published by the Institute for Social Research)

These volumes contain univariate and selected bivariate percentagized frequency distributions on all questions asked in a given year. Also contained is a cross-time index for locating the same question in the other years of the study in which it was contained. Order directly from Monitoring the Future, Institute for Social Research Room 2311, P. O. Box 1248, Ann Arbor, Michigan 48106-1248.

Monitoring the Future: Questionnaire responses from the nation's high school seniors, 1975. L.D. Johnston and J.G. Bachman, 1980, 188 pp.

Monitoring the Future: Questionnaire responses from the nation's high school seniors, 1976. J.G. Bachman, L.D. Johnston, and P.M. O'Malley, 1980, 264 pp.

Monitoring the Future: Questionnaire responses from the nation's high school seniors, 1977. L.D. Johnston, J.G. Bachman, and P.M. O'Malley, 1980, 266 pp.

Monitoring the Future: Questionnaire responses from the nation's high school seniors, 1978. J.G. Bachman, L.D. Johnston, and P.M. O'Malley, 1980, 266 pp.

Monitoring the Future: Questionnaire responses from the nation's high school seniors, 1979. L.D. Johnston, J.G. Bachman, and P.M. O'Malley, 1980, 266 pp.

Monitoring the Future: Questionnaire responses from the nation's high school seniors, 1980. J.G. Bachman, L.D. Johnston, and P.M. O'Malley, 1981, 266 pp.

ANNUAL VOLUMES ON TRENDS IN DRUG USE AND RELATED FACTORS

(Published by the National Institute on Drug Abuse)

Volumes in this series may be ordered from the National Clearinghouse for Alcohol and Drug Information, P.O. Box 2345, Rockville, MD 20852 (Tel. 1-800-729-6686). There is no charge for single copies.

Drug use among American high school students 1975-1977 (DHEW Publication No. ADM 78-619). L.D. Johnston, J.G. Bachman, and P.M. O'Malley, 1978, 256 pp.

Highlights from drug use among American high school students 1975-1977 (DHEW Publication No. ADM 78-621). L.D. Johnston, J.G. Bachman, and P.M. O'Malley, 1978, 43 pp.

Drugs and the class of 1978: Behaviors, attitudes, and recent national trends (DHEW Publication No. ADM 79-877). L.D. Johnston, J.G. Bachman, and P.M. O'Malley, 1979, 376 pp.

Highlights from drugs and the class of 1978: Behaviors, attitudes, and recent national trends (DHEW Publication No. ADM 79-878). L.D. Johnston, J.G. Bachman, and P.M. O'Malley, 1979, 62 pp.

1979 Highlights: Drugs and the nation's high school students, Five year national trends (DHEW Publication No. ADM 80-930). L.D. Johnston, J.G. Bachman, and P.M. O'Malley, 1979, 85 pp.

Highlights from student drug use in America, 1975-1980 (DHHS Publication No. ADM 81-1066). L.D. Johnston, J.G. Bachman, and P.M. O'Malley, 1981, 120 pp.

Highlights from student drug use in America, 1975-1981 (DHHS Publication No. ADM 82-1208). L.D. Johnston, J.G. Bachman, and P.M. O'Malley, 1981, 130 pp.

Student drug use in America, 1975-1981 (DHHS Publication No. ADM 89-1221). L.D. Johnston, J.G. Bachman, and P.M. O'Malley, 1982, 433 pp.

Student drug use, attitudes, and beliefs: National trends, 1975-1982 (DHHS Publication No. ADM 83-1260). L.D. Johnston, J.G. Bachman, and P.M. O'Malley, 1983, 134 pp.

Highlights from drugs and American high school students, 1975-1983 (DHHS Publication No. ADM 84-1317). L.D. Johnston, P.M. O'Malley, and J.G. Bachman, 1984, 135 pp.

Drugs and American high school students: 1975-1983 (DHHS Publication No. ADM 85-1374). L.D. Johnston, P.M. O'Malley, and J.G. Bachman, 1984, 492 pp.

Use of licit and illicit drugs by America's high school students: 1975-1984 (DHHS Publication No. ADM 85-1394). L.D. Johnston, P.M. O'Malley, and J.G. Bachman, 1985, 167 pp.

Drug use among American high school students, college students, and other young adults: National trends through 1985 (DHHS Publication No. ADM 86-1450). L.D. Johnston, P.M. O'Malley, and J.G. Bachman, 1986, 237 pp.

National trends in drug use and related factors among American high school students and young adults, 1975-1986 (DHHS Publication No. ADM 87-1535). L.D. Johnston, P.M. O'Malley, and J.G. Bachman, 1987, 265 pp.

Illicit drug use, smoking, and drinking by America's high school students, college students, and young adults: 1975-1987 (DHHS Publication No. ADM 89-1602). L.D. Johnston, P.M. O'Malley, and J.G. Bachman, 1988, 307 pp.

Drug use, drinking, and smoking: National survey results from high school, college, and young adult populations, 1975-1988 (DHHS Publication No. ADM 89-1638). L.D. Johnston, P.M. O'Malley, and J.G. Bachman, 1989, 339 pp.

Trends in drug use and associated factors among American high school students, college students, and young adults: 1975-1989 (Institute for Social Research: Ann Arbor, MI). L.D. Johnston, P.M. O'Malley, and J.G. Bachman, 1991, 331 pp.

Drug use among American high school seniors, college students and young adults, 1975-1990, Volume I: High school seniors (DHHS Publication No. (ADM) 91-1813) and *Volume II: College students and young adults* (DHHS Publication No. (ADM) 91-1835). L.D. Johnston, P.M. O'Malley, and J.G. Bachman, 1991, 199 pp. and 168 pp., respectively.

Smoking, drinking, and illicit drug use among American secondary school students, college students, and young adults, 1975-1991. Volume I: Secondary school students (DHHS Pub. No. (NIH) 93-3481). *Volume II: College students and young adults* (DHHS Pub. No. (NIH) 93-3481). L.D. Johnston, P.M. O'Malley, and J.G. Bachman, 1992, 231 pp. and 176 pp., respectively.

National survey results on drug use from the Monitoring the Future study, 1975-1992. Volume I: Secondary school students (NIH Pub. No. 93-3597). *Volume II: College students and young adults* (NIH Pub. No. 93-3598). L.D. Johnston, P.M. O'Malley, & J.G. Bachman, 1993, 269 pp. and 190 pp., respectively.

National survey results on drug use from the Monitoring the Future study 1975-1993. Volume I: Secondary school students (NIH Pub. No. 94-3809). *Volume II: College students and young adults* (NIH Pub. No. 94-3810). L.D. Johnston, P.M. O'Malley, and J.G. Bachman, 1994, 281 pp. and 189 pp., respectively.

National survey results on drug use from the Monitoring the Future study, 1975-1994. Volume I: Secondary school students (NIH Pub. No. 95-4026). *Volume II: College students and young adults* (1996). (NIH Pub. No. 96-4027). L.D. Johnston, P.M. O'Malley, and J.G. Bachman, 1995, 327 pp. and 189 pp., respectively.

National survey results on drug use from the Monitoring the Future study, 1975-1995. Volume I: Secondary school students (1996). (NIH Pub. No. 96-4139). *Volume II: College students and young adults* (1997). (NIH Pub. No. 98-4140). L.D. Johnston, P.M. O'Malley, and J.G. Bachman, 381 pp. and 188 pp., respectively.

National survey results on drug use from the Monitoring the Future study, 1975-1997. Volume I: Secondary school students (1998). (NIH Pub. No. 98-4345). *Volume II: College students and young adults* (1998). (NIH Pub. No. 98-4346). L.D. Johnston, P.M. O'Malley, and J.G. Bachman, 433 pp. and 206 pp., respectively.

National survey results on drug use from the Monitoring the Future study, 1975-1998. Volume I: Secondary school students (1999). (NIH Pub. No. 99-4660). *Volume II: College students and young adults* (NIH Pub. No. 99-4661). L.D. Johnston, P.M. O'Malley, & J.G. Bachman, 420 pp. and 218 pp., respectively.

Monitoring the Future national results on adolescent drug use: Overview of key findings, 1999 (2000). (NIH Publication No. 00-4690). L.D. Johnston, P.M. O'Malley, & J.G. Bachman, 56 pp.

SAMPLE SIZE AND STUDENT RESPONSE RATES
(continued)

```
                1999
                -----

# Public Schools    124

# Private Schools    19

Total # Schools     143

Total # Students 14,056

Student Response
Rate (%) *          83%
```

----

* The student response rate is derived by dividing the attained
sample by the target sample (both based on weighted numbers of
cases). The target sample is based upon listings provided by
schools. Since such listings may fail to take account of recent
student attrition, the actual response rate may be slightly
underestimated.

Table 1

SUBJECT AREA KEY

(Referenced by letter in the Variable Labels)

A. DRUGS. Drug use and related attitudes and beliefs, drug
   availability and exposure, surrounding conditions and social
   meaning of drug use. Views of significant others regarding
   drugs.

   A01 Use of Various Licit and Illicit Drugs
          A01a - . . . in lifetime
          A01b - . . . in the last 12 months
          A01c - . . . in the last 30 days
          A01d -Quantity used
          A01e -How high? (How often?)
          A01f -How long high?
          A01g -Incidence of first use
          A01h -Use with other drugs
          A01i -Try to stop?
          A01j -Use on doctor's orders?
          A01k -Bad trip?
          A01l -Kinds of drugs

   A02 Exposure to Drug Use
          A02a -Friends' use of drugs
          A02b -Exposure to users

   A03a Availability of Drugs

   A04a Expected Future Use

   A05 Conditions of Use
          A05a -Alone
          A05b -With others
          A05c -Settings (at school, at home, etc.)
          A05d -Mode of drug administration

   A06 Reasons for Use, Abstention, and Stopping
          A06a -Reasons for drug use
          A06b -Reasons for abstention from, or stopping drug use

   A07 Drug Problems
          A07a -Driving, tickets, and accidents after use
          A07b -Other problems

   A08a Sources of Help and Treatment regarding Drugs

   A09 Others' Awareness of Use
          A09a -Parental awareness of use
          A09b -Others' awareness of use
          A09c -Police awareness of use

   A10 Drug Education and Communication

```
        A10a -In school
        A10b -In the mass media

A11  Own Attitudes regarding Drugs and Drug Users
        A11a -For adults
        A11b -For own children
        A11c -Perception of drug users
        A11d -Use by high school age people

A12  Others' Attitudes regarding Drugs and Drug Users
        A12a -Parents
        A12b -Friends and students
        A12c -Perception of drug users

A13  Legal Issues regarding Drugs
        A13a -Preferred legality for adults
        A13b -Own response to legalization
        A13c -Knowledge of marijuana laws

A14  Risk of Drug Harm
        A14a -To self
        A14b -To others

A15a Admitting Use in Questionnaire

A16a Parent Groups

A17  Role Models in the Larger Environment
        A17a -Perceived use of drugs
        A17b -Perceived attitudes regarding drugs

B. EDUCATION.

B01  High school: scholastic status, objectives, experiences

B02  Combining work and school: attitudes, experiences

B03  Interracial contact at school

B04  Student norms, misbehavior in class

B05  Counseling

B06  Absenteeism and truancy

B07  Delinquency, victimization and feeling safe at school

B08  Opinions regarding competency testing

B09  Post high school: status, plans, characteristics

B10  Attitudes regarding educational institutions

B11  High school: length of experiences
```

C.   WORK AND LEISURE

    C01   Present or recent work experience

    C02   Income sources; financial security

    C03   Vocational plans, aspirations, expectations

    C04   Preferences regarding job characteristics

    C05   Desirability of different working arrangements and settings

    C06   Work ethic/success orientation

    C07   Leisure time: extent, activities

    C08   Attitudes toward leisure time

D. SEX ROLES AND FAMILY.

    D01   Dating and marriage: status, attitudes, expectations

    D02   Parenthood: status, attitudes, expectations

    D03   Values surrounding marriage and family

    D04   Preferences regarding marital/familial arrangements

    D05   Sex role attitudes

    D06   Opinions regarding sex discrimination

E. POPULATION CONCERNS.

    E01   Overpopulation

    E02   Birth control

F. CONSERVATION, MATERIALISM, EQUITY, ETC.

    F01   Personal materialism

    F02   Societal materialism and advertising

    F03   Concern with world hunger and poverty

    F04   Ecological concerns

    F05   Concern with conservation of resources

    F06   Preferences regarding dwelling type and urbanicity

    F07   Driving and use of mass transit

G. RELIGION. Religious preferences, activities, views.

H. POLITICS.

    H01 Political interest and preferences

    H02 Attitudes toward governmental policies and practices

    H03 Views about the role of citizens in government (See also
         I02: Attitudes regarding activism)

    H04 Confidence in government

    H05 Voting, political activism

I. SOCIAL CHANGE.

    I01 Expectations concerning societal change

    I02 Attitudes regarding activism

    I03 Reactions to personal and social change

J. SOCIAL PROBLEMS. Interest and concerns

K. MAJOR SOCIAL INSTITUTIONS.

    K01 Trust (See also C05: Institutions as work settings)

    K02 Satisfaction with performance

    K03 Preferred influence

L. MILITARY.

    L01 Plans for military service

    L02 Attitudes toward a draft

    L03 Views about the use of military force

    L04 Attitudes toward the military as an institution and occupation

M. INTERPERSONAL RELATIONSHIPS.

    M01 Dating

    M02 Cross-age relationships with adults outside the family (See
         also B05)

    M03 Agreement/disagreement with parents

M04 Friendships (See also Q03: Loneliness)

M05 Community at large

N. RACE RELATIONS.

N01 Preferred interracial contact

N02 Attitudes about discrimination

N03 Actual interracial contacts

O. CONCERN FOR OTHERS.

O01 Attitudes regarding social service, charitable activism

O02 Involvement in community, altruistic activities

O03 Concern with the problems of others

P. HAPPINESS.

P01 Happiness: satisfaction with life and self

P02 Satisfaction with specific life domains

Q. OTHER PERSONALITY VARIABLES.

Q01 Attitudes about self, self-esteem

Q02 Locus of control

Q03 Loneliness

Q04 Risk taking

Q05 Trust in others

Q06 (Changed to Subject Areas T01-TO4.)

Q07 Importance placed on various life goals

Q08 Social, political, cultural orientation

Q09 Hostility

R. BACKGROUND.

    R01   Age, sex, race, and marital status

    R02   Family characteristics

    R03   Living arrangements and household characteristics

S. DEVIANCE AND VICTIMIZATION.

    S01   Delinquent behaviors

    S02   Driving violations and accidents

    S03   Victimization experiences

T. HEALTH.

    T01   Symptoms

    T02   Habits

    T03   Height and weight

    T04   Medical treatment
