PROCESSING NOTES FOR ICPSR #32041
Kenyan Democratization Project, 2006

1) The fieldwork dates in the data file are not consistent with the fieldwork dates in the "Producer Codebook" section of the ICPSR codebook. For reference, the dates in accordance with the data file are listed below:

Fieldwork Dates	
05/29/2006	07/04/2006

2) **Value Labels:** Stata prohibits adding value labels to non-integer codes; the presence of value labels for non-integer codes causes errors when using Stata. The KENYAN DEMOCRATICATION PROJECT, 2006 contains ten variables containing non-integer codes: Q16, Q17, Q18, Q19, Q20, Q21, Q22, Q23, Q24, and Q25. The value labels associated with these variables were removed from the Stata setup files and Stata system file to ensure that they work correctly. Value labels for these variables can, however, be found in the SPSS and SAS setup files and in the codebook.

3) Variable RESPNO (Respondent number) has a duplicate value, 757.

4) Variables Q63, Q64, and Q65 do not appear in the "Survey" section of the ICPSR Codebook; however, these variables are found in the data and the Producer Codebook.

5) **Unknown Code:**
   - The variables listed have the following code in the data for which no clear explanation can be given:

     Q6 '219'
     Q15 '0'
     Q17 '2'
     Q21 '3'
     Q41 '2'
     Q47 '0'
     Q62 '99'
     Q65 '2'

CODEBOOK SURVEY DATA 2.1 (2011)

First draft compiled by Brian Hansbury, Fall 2006
- Revised by Dr. Kristin Bremer and Dr. Steve Lem, Spring 2011

Rationale: Democratization in many African nations has been a slow and arduous process. Regime corruption has frequently stifled the economic, social, and political reform citizens hoped to achieve through free and competitive elections. Since independence in 1963, Kenya's development has been stifled by disaster, domestic conflict, corruption, and economic and political mismanagement. Campaigning on a platform emphasizing political reform, Mwai Kibaki won the presidency in the 2002 election. During the first term of the Kibaki government, a number of anti-corruption practices were implemented along with the promise of constitutional reform. In 2005, Parliament passed a draft of a new constitution, which was put to the voters in the November referendum. A majority of voters rejected the reform. This poll was designed to measure societal support for various constitutional reform proposals, support for the Kibaki government, and trust in the government more generally. At the most fundamental level, the project attempts to measure the attitudes of Kenyan citizens on the democratization process during 2005-2006 period. The survey was designed to assess the interplay between ethnicity, attitudes on constitutional reform, the economy, and foreign influence in Kenya.

Methodology: In June and July 2006, a team of researchers from Kutztown University and Kenyatta University administered the surveys. The pollers completed a two day training exercise where they learned the fundamentals of polling and practiced before polling the general public. All interviews were conducted in-person. All pollers worked in teams of two or more and were observed throughout the work. When translation was necessary, at least one additional person checked the accuracy of the translation (both the question being asked and the answer being recorded). The questionnaire was written in English but was translated to either Kiswahili or a local dialectic when necessary.

The survey used stratified cluster sampling by targeting all seven Kenyan provinces (Central, Coastal, Eastern, Nairobi, North Easter, Nyanza, Rift Valley and Western) and then administering random sampling. This project sought data from across Kenya in hopes of gaining a more representative sample of the population then surveys that focused on Nairobi. In the larger cities, such as Nairobi and Mombasa the research team divided the cities into zones. In groups of two or more the team would then administer the surveys in each of the zones. Numerous concerns, such as safety and the lack of public databases that would contain names or addresses, made truly random sampling impossible. However, the research team did its best to randomly interviewed people from as many diverse locations as possible (e.g. Kibera to the Nairobi business district).

In the rural areas, the research team attempted to follow the same guidelines but the distance between villages and houses, and the lack of telephones was a limiting factor. Therefore, we randomly identified villages in the rural areas of each of the seven providences. The consequence is that we tended to get a very high response rate in each of the villages (i.e. everyone wanted to talk to us) but we did not reach a lot of villages due to the distance between them.

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.
