Information about Copyrighted Content

Some instruments administered as part of this study may contain in whole or substantially in part contents from copyrighted instruments. Reproductions of the instruments are provided as documentation for the analysis of the data associated with this collection. Restrictions on "fair use" apply to all copyrighted content. More information about the reproduction of copyrighted works by educators and librarians is available from the United States Copyright Office.

NOTICE

WARNING CONCERNING COPYRIGHT RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material. Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

ICPSR CODEBOOK NOTES

Texas and Southwestern Cattle Raisers Association Questions 7-11

- 1) Users should be aware that the data in Parts 2-5 have some features that affect their analytic utility. The data available are actually frequencies and descriptive statistics that are presented in the final report from the principal investigators (Knowles et al., 2005; NCJ 212280). Parts 2-5 each contain a single respondent group's answers to a series of questions for a single respondent affiliation – questions 7-11 of the livestock industry survey. The variables in the data file represent different response options for each question. The table below shows the correspondence between part and respondent group.

Part Number	Livestock Industry Association
2	Kansas Cattlemen's Association (KCA)
3	Kansas Livestock Association (KLA)
4	Oklahoma Cattlemen's Association (OCA)
5	Texas and Southwestern Cattle Raisers Association (TSCRA)

- 2) For all files in this collection, ICPSR converted the original Excel and Word data into SPSS, SAS and Stata. In converting the original files, ICPSR assigned variable labels and value labels based on information contained in the original data collection instruments, which are being distributed in the separate Data Collection Instruments file for this data collection. Variable names assigned by ICPSR for Parts 2-5 are a combination of the question number and a 4 or 5 letter abbreviation of a response option.
- 3) In addition to disseminating the SPSS, SAS, and Stata files, ICPSR is disseminating the original Excel and Word data files in a Zip Archive file. Part 5 corresponds to the original file Bio-Terrorism_Q7-11.xls, sheet "Texas".
- 4) Users should be aware that while the livestock industry survey included 15 questions, responses to questions 1-6 were not included in any of the data files. Frequencies for these variables can be found in the Data Documentation file for this collection. Responses to questions 7-15 can be found in Parts 2-15.

- 5) Part 5 contains several variables with rank order responses on a scale of one to five. ICPSR assigned the value label of "Undocumented code" to values in these variables outside of the range of expected values that are specified in the original data collection instrument.

Defining Law Enforcements Role in Protecting American Agriculture From Agroterrorism in Kansas, Oklahoma, and Texas, 2003-2004

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.
