Information about Copyrighted Content

Some instruments administered as part of this study may contain in whole or substantially in part contents from copyrighted instruments. Reproductions of the instruments are provided as documentation for the analysis of the data associated with this collection. Restrictions on "fair use" apply to all copyrighted content. More information about the reproduction of copyrighted works by educators and librarians is available from the United States Copyright Office.

NOTICE

WARNING CONCERNING COPYRIGHT RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material. Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

ICPSR Processing Notes

1. To protect respondent privacy, certain identifying information is restricted from general dissemination. Users interested in obtaining these data must complete a Restricted Data Use Agreement form and specify the reasons for the request. A copy of the Restricted Data Use Agreement form can be requested by calling 800-999-0960. Researchers can also download this form as a Portable Document Format (PDF) file from the download page associated with this dataset.

Completed forms should be returned to: Director, National Archive of Criminal Justice Data, Inter-university Consortium for Political and Social Research, Institute for Social Research, P.O. Box 1248, University of Michigan, Ann Arbor, MI 48106-1248, or by fax: 734-647-8200.

2. ICPSR recoded blanks in numeric variables to -9 and labeled them Blank. All declared missing codes other than -9 were assigned by the principal investigators in the original data file.

3. Users should be aware that this data collection may contain undocumented codes. These codes were not labeled by the principal investigator nor were they labeled by ICPSR.

4. For confidentiality reasons, several variables in each data file have specific information masked. This includes information bracketed between "[" and "]". For example, the variable HESITNTAA (REASONS WHY HESITANT - PART 1) in the Part 1 (Victims Data) data file includes the text "[ADVOCATE]" which masks identifying data.

5. The following variables were masked by ICPSR:

Part 2 (Providers Data)

INTERVIEWER (INTERVIEWER)

6. The variable ID_NUM was created by ICPSR for each data file.
7. For confidentiality reasons, some original date variables were split into 2 variables - one for month and one for year. One example of this is the variables DATEM (DATE OF INTERVIEW - MONTH) and DATEY (DATE OF INTERVIEW - YEAR) in the Part 1 (Victims Data) data file.
8. In the Part 3 (Police Data) data file, the variable YEARSA (IF LESS THAN ONE YEAR, HOW MANY MONTHS HAVE YOU BEEN AN OFFICER) has 1 value of 17 which appears to be out of a valid range.
9. Because long character variables may cause errors in some versions of certain statistical software packages, ICPSR divided the following long character variables into two variables:

Providing a Citywide System of Single Point Access to Domestic Violence Information, Resources, and Referrals to a Diverse Population: An Evaluation of the City of Chicago Domestic Violence Help Line, 2004-2005

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.
