Series Statement

Series Name: Offender Based Transaction Statistics (OBTS) Series

Series Information: Offender Based Transaction Statistics (OBTS) studies are designed to collect information by tracking adult offenders from the point of entry into the criminal justice system (typically by arrest) through final disposition, regardless of whether the offender is convicted or acquitted. Information is provided on arrest, police action, prosecutor action, level of charges, charges filed by the prosecutor, type of counsel, pretrial status, type of trial, sentence type, and sentence length. This allows researchers to examine how the criminal justice system processes offenders, to measure the changing volume of offenders moving through the different segments of the criminal justice system, to calculate processing time intervals between major decision-making events, and to assess the changing structure of the offender population.

Abstract

In 1973, the National Criminal Justice Information and Statistics Services (the predecessor of BJS) established the Comprehensive Data Systems (CDS) program. The primary goal of this program was to assist states in developing operational statistical information systems in an effort to improve the criminal justice process. A component of the CDS program was the Computerized Criminal Histories/Offender Based Transaction Statistics (CCH/OBTS). It focused on arrested alleged offenders, and was designed to supply information regarding the individual's prior criminal activities as well as the formal criminal justice system response. In addition, OBTS provided information on the criminal justice process and the time necessary to complete various stages within the process.

The Offender Based Transaction Statistics consist of data which allow examination of offender characteristics and patterns of arrest actions, prosecution activities, court action, and case disposition. Collected by individual states from existing data, the dataset includes reported felony cases which reached disposition during the calendar year 1983. This means that regardless of the date which an individual entered the criminal justice system, if he/she was given final disposition of his/her case during 1983, he/she became a candidate for this dataset.

It is important to note that this dataset does not contain all dispositions occurring in a given year; only those reported to the state repository, and for which the repository had a previous arrest reported. In some states the disposition reporting rate may be lower than the arrest reporting rate. Also, arrests are based generally on fingerprint submissions. If the fingerprint is not readable, the arrest report is not accepted. Thus, this dataset should not be construed to be a census of disposition reporting within a state.

In essence, this dataset provides a description of the administration of adult criminal justice in terms of the flow of offenders through the system and the time intervals between various events. There are selected facts about arrested offenders, and the actions taken by police, prosecutors, and courts.

Using the individual adult offender as the unit of analysis, selected information is provided about the offender and his or her arrest, prosecution, and court disposition. Examples of variables included are: arrest and level of arrest charge, date of arrest, general offense code, pre-trial status, charge filed by the prosecution, prosecutor or grand jury disposition, type of counsel, type of trial, court disposition, sentence type, and minimum and maximum sentence length. Dates of disposition of each stage of the process allow for tracking of time spent at each stage. In cases where the offender is charged with multiple offenses, the most serious charge and most serious outcome at each stage of the process (from the offender's point of view) are provided.

All fields within the OBTS record permit coding for "unknown." However, every effort has been made to obtain the data for specific fields: age of arrest, date of arrest, arrest charge, court disposed charge, court disposition, date of court disposition, sentence, sentence minimum, and sentence maximum. Thus, these fields should have a high degree (90+%) of data for all states, while the other fields' data will depend solely on the reporting activities of a particular state.

- Study 08449 -

The Bureau of Justice Statistics (BJS) compiles and disseminates statistical information concerning the operation of the criminal justice system at the federal, state, and local levels. The OBTS dataset is one such collection of information. The data are in one file which has 61 variables for 450,996 cases.

Summary Data Description

Time Period:	1983
Date(s) of Collection:	1983
Country:	United States
Geographic Coverage:	California, Minnesota, Nebraska, New York (state), Ohio, Pennsylvania, Utah, Virgin Islands of the United States, Virginia
Unit of Analysis:	Individual adult offender
Universe:	Persons in the United States who have achieved adult status (as specified by individual state laws) and who have been processed for felonies by the police, prosecutors, or courts, whether or not there is a final determination of guilt.
Kind of Data:	event/transaction data, and survey data

Methodology and Processing

Data Collection Methodology

Data Collector:	United States Department of Justice. Bureau of Justice Statistics
Characteristics of Data Collection Situation:	The data for OBTS was collected on a state-by-state basis. Individual states conducted their own data compilation from existing data. Data tapes were then transported to the Regional Justice Information Service (REJIS) for condensing and editing. As stated above, the unit of analysis is the individual offender. For this study an offender is defined as any person who is processed by the police, prosecutor, or courts regardless of whether or not there is a final determination of guilt. Adult status is specified by individual state laws. Any juvenile processed as an adult is considered an adult.
Control Operations:	The data was checked for errors first by the individual states. Then after the data was sent to REJIS, a second check was made. Specific data elements were validated individually or as a component of conditional checks. Validation checks insure that each data element is in the proper format and range, while conditional checks are for correctness of relationships between data elements.

Notes

Definitions used in this study are taken from the Dictionary of Criminal Justice Data Terminology (Second edition, 1981), published by BJS. These definitions appear in the glossary. Due to differences among state statutes regarding criminal offense codes, the National Crime Information Center (NCIC) codes are used here. The codes appear in Note 1 of the Appendix. Also, arresting agency codes appear in Note 2 of the Appendix.

The OBTS record reflects an arrest-to-disposition event. It does not reflect all charges, dispositions, or most serious sentences for an event. It is a composite of the most serious charge, disposition, and most serious sentence. For example, an individual may have been arrested for Burglary, Auto Theft, and Destruction of Property, prosecuted for only Auto Theft and Destruction of Property, and convicted of only Destruction of Property. Therefore, the OBTS record would show Arrested for Burglary, Prosecuted for Auto Theft, Convicted of Destruction of Property, and sentenced to some period of time. See Note 3 of the

Data Files Description

File-by-File Description

File Name: 08449-0001-Data.txt

File Structure (rectangular)

File Dimensions:

- No. of Cases: 450996
- No. of Variables: 61
- Record Length: 156

Extent of Processing Checks: The data collection was processed according to standard ICPSR processing procedures. The data were checked for illegal or inconsistent code values which, when found, were resolved or recoded to missing data. No consistency checks were performed.

Missing Data:

(1) For reasons of confidentiality, the "day" variables in the dates have been blanked in the public release version of the data. Consequently, additional variables have been created to provide the elapsed time between the day of arrest and the days of the police disposition, the prosecutor/grand jury disposition, the final court disposition, and the sentencing date.

(2) Due to the unreliability of arresting agency data below the county level, the variable 'Sub-county Code' has been blanked.

Notes

The elapsed time variables were created by the ICPSR using the dates provided in the data. Some values are out of range (negative values). We were unable to resolve this with the principal investigator.

Encrypted Identification Number

The encrypted ID number is an alphanumeric variable.

This variable is used to show repeated processing of the same individual (recidivism) by the criminal justice system. It is assigned to each person who has been positively identified and for whom one or more OBTS records has been created, and is the same for all records pertaining to that person, regardless of the year of processing. It cannot be used to determine the offender's identity.

Code 9's if there is not positive identification.

Sentencing Date: Elapsed Time

The elapsed time between the day of arrest and day of final sentencing is coded, measured in number of days.

The elapsed time variables were created by the ICPSR using the dates provided in the data. Some values are out of range (negative values). We were unable to resolve this with the principal investigator.

NOTE: Either the final disposition date or sentencing date must be provided.
