NAHDAP provides the following services to assist data users and depositors:
- Identification of data about tobacco use alone as well as tobacco use data associated with specific topics
- Customized subsetting and online analysis of selected datasets
- Assistance with retrieval and use of data files from the NAHDAP website
- Bibliographic support to locate publications based on use of the datasets in NAHDAP
- Data preparation tips and secure online deposit to archive and share data through NAHDAP

The PATH Study is a collaboration between NIH/National Institute on Drug Abuse and FDA/Center for Tobacco Products to inform FDA’s regulatory activities under the 2009 Family Smoking Prevention and Tobacco Control Act.

- Households-based, nationally representative, longitudinal cohort study of tobacco and non-tobacco users age 12 years and older
- Two cohorts at Wave 1
  > Adult cohort: 32,320 interviews
  > Youth/parent cohort: 13,651 interviews
- PATH Study data topics
  > Tobacco products: cigarettes, e-cigarettes, pipes, hookah, smokeless tobacco, dissolvable tobacco, traditional cigars, cigarillos, filtered cigars (adult and youth); bidis and kreteks (youth only)
  > Tobacco use: ever and recent use, frequency and amount of use, brands used, purchasing patterns
  > Other topics: attitudes and beliefs, health outcomes, secondhand smoke exposure, packaging, marketing, media use, cessation, peer and family influences
- Questionnaire data available now
  > Wave 1, restricted-use file (RUF), released December 2015
  > Access to Wave 1 RUF to qualified researchers
  > Apply online using link in Access Notes of ICPSR study description
- Questionnaire data available in the future
  > Wave 2 in 2017 and Wave 3 in 2018
  > Public-use files (downloadable) approx. 9 to 12 months after each RUF release

Featured Dataset

Population Assessment of Tobacco and Health (PATH) Study

Tobacco and Nicotine Data Available

Datasets from NAHDAP, including the PATH Study, are available for use in SAS, SPSS, Stata, R, and ASCII formats. Some can also be analyzed online with results displayed as tables or charts. Robust searching can be done at the study level and variable level (often including full question text). Variables across several datasets can be selected to compare side-by-side online.

NAHDAP study topics at a glance
- Tobacco products (cigarettes, cigars, pipes, smokeless tobacco, flavored tobacco, waterpipe/hookah, e-cigarettes)
- Tobacco use disparities within specific populations
- Health departments and treatment facilities
- Smoking and the media/marketing
- Adolescents and nicotine use
- Tobacco use and alcohol and/or marijuana use
- Smoking and psychiatric comorbidities
- International/cross-national studies
- Smoking cessation
- Biomeasures
- Secondhand smoke exposure
- Smokers living with HIV
- Smoking in pregnancy
